

The European GEO context for GEO-CRADLE

GEO CRADLE Kick-Off Meeting Athens, 19 February 2016

Jose Miguel RUBIO IGLESIAS EUROPEAN COMMISSION DG RTD - Directorate General Research & Innovation Directorate Climate Action and Resource Efficiency, Earth Observation Sector Jose-Miguel.RUBIO-IGLESIAS@ec.europa.eu

Research and

GEO and GEOSS – Why?

- Earth observation data: too often collected for a single purpose, use(r) hardly shared or made discoverable
- Global landscape for Earth system monitoring: still too fragmented
- Addressing the full Earth system's dynamics exceeds the capability of any country, or any scientific community
- Scientific understanding and on-going knowledge of the Earth system is fundamental for well-informed economic decision-making
- To sustained Earth observations is a critical issue

Hence, a global approach to Earth observations is required

Update on GEO – renewed till 2025

Latest developments:

- Renewed GEO mandate for the period 2016-2025
- Lessons learnt after 10 GEOSS years of implementation
- Mexico City Declaration, 13 November 2015 ٠
- New GEO Strategic Plan 2016-2025
- GEO Work Programmes (2016, 2017-2019)
- **GEO Programme Board**

225 2nd GEO Mandate 1st GEO Mandate

Regional dimension in the GEO context

GEO membership: All members belong to a regional caucus.

Mexico Summit Declaration of 13 November 2015:

"(...) Resolve to strengthen and facilitate the active participation of developing countries in GEO and the GEOSS, including <u>through regional initiatives</u> (...)"

GEO Strategic Plan 2016-2025:

- <u>Stakeholder engagement and Capacity Building</u>: "GEO will (...) promote regional cooperation through national and regional GEO mechanisms"
- <u>Core function Implementing sustained global and regional services</u>:
 "(...) Incubate and pilot regional (...) initiatives to provide data or information
 services to meet shared information needs for societal benefits (...)"
- <u>Core function Cultivating awareness, building capacity and</u> <u>promoting innovation</u>: "(...) Strengthen cooperation at regional (...) level by identifying country-specific opportunities to develop EO plans and establishing national GEO structures(...)"

Europe and GEO & GEOSS

 Key instrument to deliver data and information to inform EU policy objectives (e.g. Space, Climate, Energy, Marine, Development policies)

- Support EU in **negotiations and international agreements** (e.g. Agenda post-2015 for SD, CBD, UNFCCC, CBD, UNSDR).

- New opportunities to **stimulate a global EO market**, with untapped business from a wealth of free, full and open EO data.

- An untapped potential for **intensifying EO innovation** and support of science diplomacy, increasing **synergies with Copernicus programme**.

The Commission agenda for Jobs, Growth, Fairness and Democratic Change (July 2014)

Ten priorities for a bigger and more ambitious Union, including:

• A Stronger Global Actor

Research and

- A Connected Digital Single Market
- A resilient energy Union with a forward-looking climate change policy

Multilateral opportunities

- UNFCCC COP 21 meeting (Paris, December 2015)
- Post-2015 Development Agenda (New York, September 2015)
- Global System of Financing for Development (Addis Ababa, July 2015)
- Post Hyogo Framework 2015-2030 (Sendai, March 2015)
- The UN Advisory Group on a Data Revolution for Sustainable Development (Nov 2014)
- The G8 Open Data Charter (June 2013)
- The United Nations initiative on Global Geospatial Information Management (UN-GGIM) (2011)

The EU Programme "Copernicus"

"Copernicus data and Copernicus information should be available freely and openly to support the Digital Agenda for Europe"

(Regulation (EU) No 377/2014 establishing the Copernicus Programme)

"GMES open dissemination should be fully compatible with GEOSS data sharing principles"

(Delegated Regulation (EU) No 1159/2013 on access to Copernicus data and infor.)

Opportunities for Europe in GEO Post-2015

- Current transition period is a **unique opportunity for Europe** to assess and review its position in GEO:
 - Lessons learnt after 10 years of GEO
 - Political momentum (GEO Ministerial in Jan 2014 and Nov 2015)
 - New 10-year Strategic Plan
 - EU Copernicus programme becoming operational
 - Horizon 2020

- European Commission has conducted **consultations** (independent experts, GEO High Level Working Group, general public) in 2013, 2014 and 2015 (including a EU survey).

 Commission Document "<u>Global Earth Observation System</u> of Systems (GEOSS): Achievements to date and challenges to 2025"

EU survey on Earth observation in a global context (Jan -Apr 2015)

• Element of a continued multi-stakeholder dialogue

• to consult on eventual Earth Observation-related actions at EU level which would support the Commission priorities fixed by President Juncker

Purposes of the consultation:

- Estimate general awareness of and stance on: Earth Observations (EO), the Group on Earth Observation (GEO), the Global Earth Observation System of Systems (GEOSS) and Copernicus;
- Appreciate how to maximize EU benefits from increased European coordination in Earth observation in the GEO context;
- Collect views and priorities on a set of possible actions at EU level.

Assessing <u>benefits</u> from a stronger EU coordination of Earth observation through GEO

Key reasons justifying a stronger EU approach to GEO and global Earth observations

Many of the environmental issues facing Europe are global in nature, calling for EO-based EU action in cooperation with other regions.	78%		21%	0%
The full and open data access to remote sensing & in-situ observations advocated by GEO offers opportunities for innovation & growth.	77%		20%	1 2 8⁄0
The EU's Copernicus programme for Earth observation can be promoted worldwide as a key EU contribution to GEOSS.	60%	30%	3%	7%
The EU could benefit from the current data revolution & the Internet of Things, which have huge potential for innovative uses of EO data & products.	56%	30%	6%1%	7%
GEO helps promote research & innovation. It is a unique forum for coordinating the whole observation community.	43%	43%	7% 19	6%
GEO is a way of leveraging existing EO-related infrastructure, programmes, projects & activities; it boosts its major contributors' international standing.	39%	45%	6%1%	9%
→ or ■ Yes, I entirely agree ■ Yes, I agree to some extent ■ No,	% 10% 20% 30% 40% 50% I disagree to some extent ■ No, I entirely disagre	60% 70% 80% e Idon't know	6 9 0 %	100%

Assessing <u>barriers</u> to a stronger EU coordination of Earth observation through GEO

Main barriers to a stronger EU approach to GEO and global Earth observations

Possible <u>EU-level action</u> in the field of global Earth observation and GEO

Towards a stronger EU approach

EU action to accelerate the trend towards open data, with a focus on Earth observations		
Stronger European Research Area in the field of Earth Observation, with more international EO research & innovation		
activities targeting GEOGG where EO openhous programme		
EU action to improve coordination of the various public bodies & systems in Europe that collect in-situ &		
socioeconomic data, to provide more structured access to such data		
Stronger operational synergies between GEOSS & the EU's Copernicus programme		
	-	
Reinforced Community research, benchmarking & pilot deployment activities in the field of EO data management, to support data reuse		
oupport data rougo		
Stronger model of European coordination (more formal & structured) vis-à-vis GEO & GEOSS, to maximise GEOSS		
benefits to the European society		
Ell action to hole develop a regional European CEOSS information austam that is interportable with the Constrainty		
dissemination infrastructure		
	-	
FU action to an assume the action to action in Fundamental action follows OFOOO husin and activities		
ED action to encourage the private sector in Europe to seize luture GEOSS business opportunities		
	-	
Benchmarking & promoting successful GEO-related coordination mechanisms, currently implemented at national &		
regional levels		
	-	
EU action to empower citizens through EO-related citizens' science & citizens' engagement in the collection of		
en vironmental data

High priority Medium priority Low priority I don't know

Research and Innovation

Towards an ERA coordination in Earth observation

- Lessons learnt from 10 years of European involvement in GEO show that Europe would gain from a more coordinated approach when conducting EO research and innovation programmes.

- A **strengthened European Research Area** would reduce fragmentation, align agendas, pool resources towards more transnational activities and leverage impact of public funded research.

- This would also consolidate R&I efforts in the context of **Copernicus**

- **FP7/Horizon 2020** overwhelmingly recognised as essential for progressing on GEOSS and adding value to national contributions. Offers great potential to achieve R&I breakthroughs in EO.

- CSAs and an ERA-NET as instruments:
 - **ConnectinGEO** CSA (February 2015 January 2017)
 - **GEO-CRADLE** CSA (February 2016 July 2018)
 - **ERA-PLANET** ERA-NET (kicked-off in February 2016)

ConnectinGCO

"Coordinating an Observation Network of Networks Encompassing Satellite and In-Situ To Fill the Gaps in European Observations"

- ConnectinGEO links existing coordinated Earth observation networks with science and technology (S&T) communities, the industry sector and the GEOSS and Copernicus stakeholders.
- The emerging UN Sustainable Development Goals (SDGs) are a motivation.
- The resulting "network of networks" (**ENEON**) should consist of a wide spectrum of European stakeholders outlasting ConnectinGEO
- Outcome of the action:
 - prioritized list of critical gaps within the European Union in observations and the models that translate observations into practice-relevant knowledge.
 - It will include the research activities required to address these gaps.
 - Increase coherency of European observation networks, increase the use of Earth observations and inform the planning for future observation systems.

European Commission

European Network of EO Networks ENEON

- The thematic partners (that represent thematic observation networks),
- The GEOSS S&T Stakeholder Network and GEOSS CoPs,
- Copernicus services, Sentinel missions and in-situ support data representatives,
- European networks representatives for space-based, airborne and in-situ observations (e.g. EPOS, EMSO and GROOM, etc)
- Representatives of the SMEs and industry sector.
- European and national funding agencies and in particular the ones participating in the ERA-PLANET

ConnectinGCO

"Coordinating an Observation Network of Networks Encompassing Satellite and In-Situ To Fill the Gaps in European Observations"

4 challenges

- Renewable energy challenge
- In-situ and Remote Sensing challenge
- In-situ integration in the GeoDAB
- Remote Sensing industry Challenge

15 Partners, 9 countries

- 1 partner in common (EARSC)

ERA-PLANET: The European Network for Observing Our Changing Planet

Kicked off earlier this week (16-17 February).

Objectives:

- Prepare and launch joint transnational calls structured along the 4 strands.
- Fund projects according to a priority list set by external experts, to monitor funded projects under the joint call
- Develop a strategic research agenda to reinforce the ERA and to coordinate the cross- and inter-cooperation of European and national programmes in EO;
- **Improve the interoperability** among existing and future projects on EO and links to the GEOSS-GCI.

4 strands of work 35 Partners, 16 countries 2 partners in common (NOA and AoA)

European Commission

Modified from slides by Nicola Pirrone (CNR)

Future beyond 2018.....

- Currently thinking of the future H2020 WP 2018-2020
- **European strategy** regarding the international dimension of Earth observation and related R&I needs and benefits
- Targeted investments for boosting the development of a **market** of Earth observation services based on the exploitation of EO-GEOSS data.
- Targeted R&I investments in support to the **consolidation of the GEOSS Common Infrastructure** and of the European hub.
- Targeted **strategic actions** in support to the 2nd 10-year phase of GEO.
- Need to move towards better integration with related EO flagship programmes such as **Copernicus** 21

Concluding remarks (I)

We expect GEO-CRADLE to:

- Identify gaps between local user needs and capacities, helping build capacities in the three regions building on past activities.
- Integrate knowledge to demonstrate value for current policy priorities (migration, energy, climate change, digital economy).
- Design a roadmap for the implementation of GEO and Copernicus as an input for future activities in region.
- Create synergies between your network and the other EU coordinating activities (ConnectinGEO/ENEON, ERA-PLANET)
- Promote a free, full and open flow of data within and beyond these regions, maximising commercial opportunities

Concluding remarks (II)

(cont'):

- Advocate GEOSS Data Sharing Principles and GEOSS Data Management Principles implementation in the three regions
- Contribute to the GEOSS implementation through participation in GEO tasks and activities, especially in-situ coordination.
- Flag (pilots') success stories of delivering knowledge from EO to ensure the policy impact of GEO-CRADLE
- Engage actively with the commercial sector in the RoI: our actions need to contribute to build the markets of the future.
- Open results as much as possible!!
- <u>Reinforce European neighbourhood contribution to GEO!</u>

- Annual event bringing together European stakeholders interested in and actively contributing to GEOSS.
- This year more focused on co-creation with GEO European actors
- Possible session focused on EO activities in the three regions coordinated by **GEO-CRADLE?**
