

Coordinating and integrating state-of-the-art  
Earth Observation Activities in the regions of  
North Africa, Middle East and Balkans  
and Developing Links with GEO related initiatives  
toward GEOSS

---

**GEO-CRADLE pre-Kick-Off Meeting**  
**Friday, 18<sup>th</sup> of February, 2016**

**Dr Marianthi Stefouli**

**Institute of Geology and Mineral  
Exploration**

*IONIC Centre, 11 Lysiou Street  
Athens, Greece*

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits : RAW MATERIALS & EARTH OBSERVATION -EO

---

## **RAW MATERIALS & EARTH OBSERVATION – PAST EXPERIENCE...**

### The " **GeoNickel**" Project

GeoNickel is an acronym of EU-supported BriteEuram  
Project No: BE-1117 entitled  
**"Integrated Technologies for Minerals Exploration, Pilot  
Project for Nickel Ore Deposits"**.

**The project was realized 1996-1998 and reported early  
1999**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits : RAW MATERIALS & EO

---

## GeoNickel

*The following corporations participated in the project: Coordinator: Outokumpu Mining Oy, Finland; Partners: LARCO, General Mining and Metallurgical Co, SA, Greece; SOFTECO SISMAT S.p.A, Software Development Company, Italy; IRIS Instruments S.A, France; GTK, Geological Survey of Finland; Associated contractors: BRGM, France; IGME, Institute of Geology and Mineral Exploration, Greece; NCSR "Demokritos", Institute of Informatics & Telecommunication, Greece; Subcontractors: University of Turku, Department of Geology, Finland; Athens University, Department of Geology, Greece.*

**Two Mining companies, two SMEs, three Geological Surveys, One Research Institute and two Universities  
Four countries...**

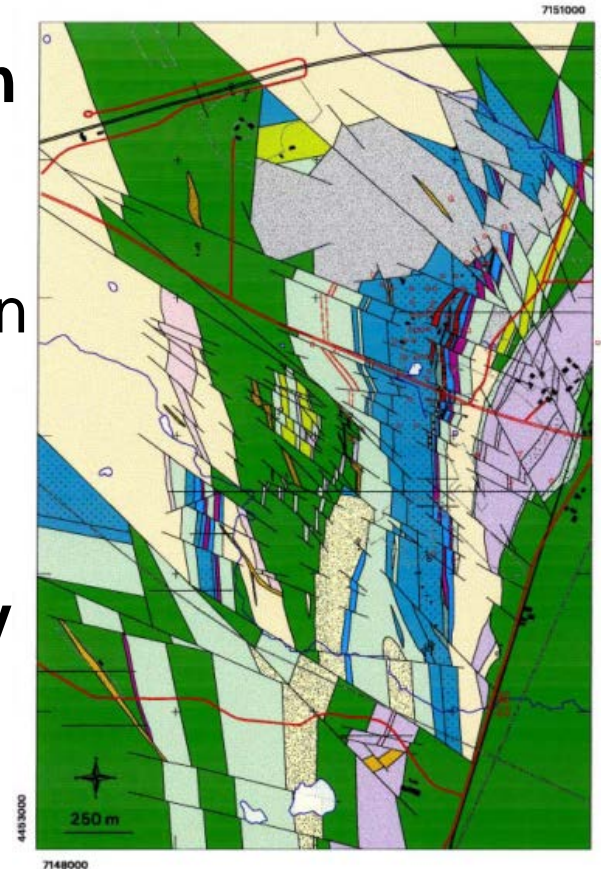

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: : RAW MATERIALS & EO

The overall objectives of GeoNickel were set to enhance the geological and geophysical knowledge on nickel ore deposits, and to develop novel, **integrated nickel exploration methods and tools**.

To meet the overall objectives, **three key areas** of methodology in nickel ore exploration were selected for research and development work:

- 1. Modelling of nickel deposits**
- 2. Development of geophysical technology**
- 3. Development of a Geo-scientific Information System (GEOSIS)**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: : RAW MATERIALS & EO

---

It was realized in six work packages:

**WP1** Mineralogy and modelling of Ni ore deposits

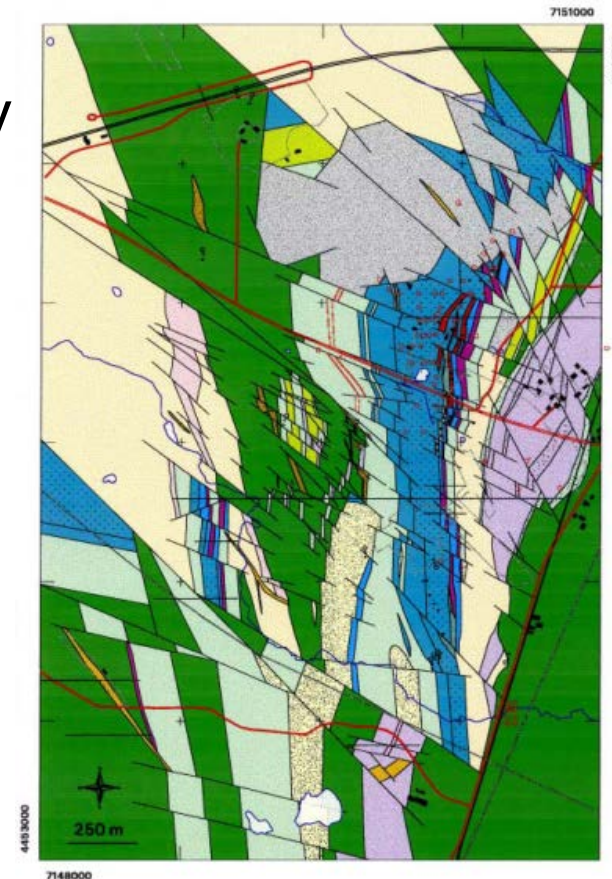

**WP2** Development of geophysical technology

**WP3** Image processing/pattern recognition

**WP4** GEOSIS design and GIS tools development

**WP5** Knowledge Based System

**WP6** Final integration and testing

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits

**WP3 was devoted to analysis of Earth Observation data and it included:**  
Data acquisition, quality evaluation / Image processing/pattern recognition  
Classification of lithology and alterations / Delineation of lineaments using  
Advanced Neural Network techniques - ANN

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

**Two Pilot areas for laterite nickel deposits**

**Pirgoi area...**

**Larymna area....**

DATA USED IN THE PROJECT: LANDSAT TM, SPOT P, SAR ERS,  
DEM, SHADED RELIEF, GEOLOGIC MAP

• **D

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

Processing of Non  
Earth  
Observation  
Data:  
**Geological Maps  
&  
DEM**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

**Image processing: Preprocessing, Image Enhancement, Spectral processing, interpretation**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits : RAW MATERIALS & EO

Data fusion of satellite images of different resolution, i.e. SPOT & Landsat TM images

**3D - DIMENSIONAL REPRESENTATION OF PIRGOI AREA OF STUDY**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits : RAW MATERIALS & EO

**Geologic maps could be updated when using Earth Observation data**

	Αλλουβιακές Αποθέσεις - Alluvium
	Ασβεστόλιθοι - Limestone
	Κλαστική Σειρά - Clastic Series
	Μάρμαρα - Marbles
	Σκιές - Shadow

	Ασβεστολιθικά κροκαλοπαγή - Limestone conglomerates
	Φλύσχος - Flysch
	Σχιστόλιθοι - Schist
	Οφιόλιθοι - Ophiolites
	Μη ταξινομημένα - Unclassified

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

Variable information can be obtained after the processing of EO data

The mapping of structural and stratigraphic features can be made quickly and quite accurately for comparatively large areas.

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits : **RAW MATERIALS & EO**

**Features related to Ni lateritic occurrences have been interpreted on the satellite images. They are not shown on general purpose geologic maps ,a,b,c**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits : **RAW MATERIALS & EO**

## **A,B,C,D,E: Features related to Ni laterites**

**A,B,C,D,E : The Cretaceous limestones that typically overlay the laterites are shown with dark /colours. Accurate delineation has been carried out for the first time for the whole of the 1:50,000 Pirgol map sheet**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

---

## Enhancement of iron oxides & clay minerals

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

**Acquisition of GIS related information**

# Automatic Classification using Neural Network Algorithms

Post processing was required for obtaining “mapping results”

## LAND COVER & EO

**Additional information is available related to land cover**

**Geological map update of lake boundary...**

**The time to delineate the general structure of the area and to support geologic mapping is minimum...**

**The information of satellite images can contribute to geologic mapping to scales up to 1:25,000**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

---

## Discussion

**Spectral characteristics of Landsat satellite TM do not always cover the needs for a “mineral exploration” project...**

**Integration with the SPOT Panchromatic image improved the spatial resolution of the images...**

**Does other satellite systems like those of the Copernicus ESA system (Sentinel ) could contribute to mineral Exploration projects?**

**This is a question that should be answered after the implementation on pilot project areas and on various types of “raw materials”**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

## Discussion

Development of a Knowledge Based System (GEOES) was based on the modelling of nickel deposits, as well as on geological, geophysical, and other data stored in geographic information system (GIS) database and on remote sensing data which were processed with innovative image processing/pattern recognition techniques

### **Integration of developed software tools**

– **classification using neural networks, automatic recognition of lineaments, expert system – into the GEOSIS system, was not fully accomplished ...**

**An integrated software system has to be used so as to act as a focal point for the active co-operation between explorers with different backgrounds!**

# Integrated Technologies for Minerals Exploration, Pilot Project for Nickel Ore Deposits: **RAW MATERIALS & EO**

**Every success  
to  
GEO-GRADEL works!**

*GeoNickel*

**Helsinki Meeting, August 1996**

The *GeoNickel* Consortium against the wall.  
Outside one of the best restaurants I have ever been.
