

# GEO-CRADLE

## Panel Session 3:

Contributions to specific challenges, GEOSS and Copernicus  
**Regional Contribution to GEOSS and Copernicus**

**Evangelos Gerasopoulos (*chair*),**

GEO-CRADLE Liaison Office, Director of the Greek GEO Office

**Jose-Miguel Rubio-Iglesias**

European Commission, DG Research & Innovation, I4

**Andiswa Mlisa**

GEO Secretariat, AfriGEOSS, CB and User Engagement

**Hesham El Ascary**

CEDARE, Regional Coordinator

**Vassilis Tsironis**

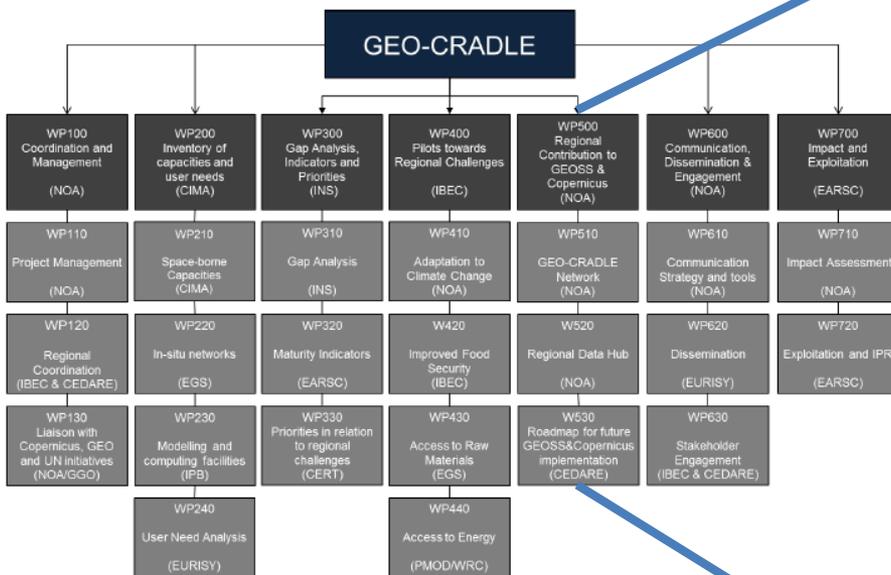

GEO-CRADLE, IT

## Panel Discussion

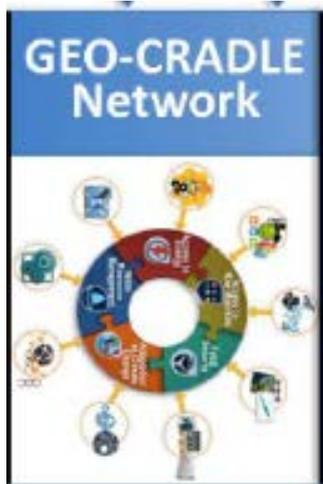

# GEO-CRADLE

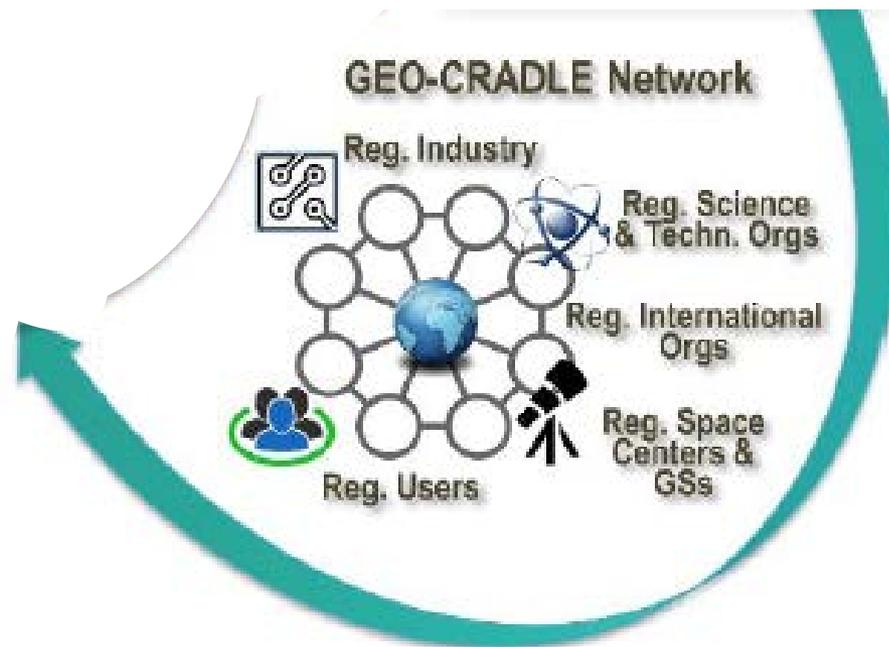

# GEO-CRADLE

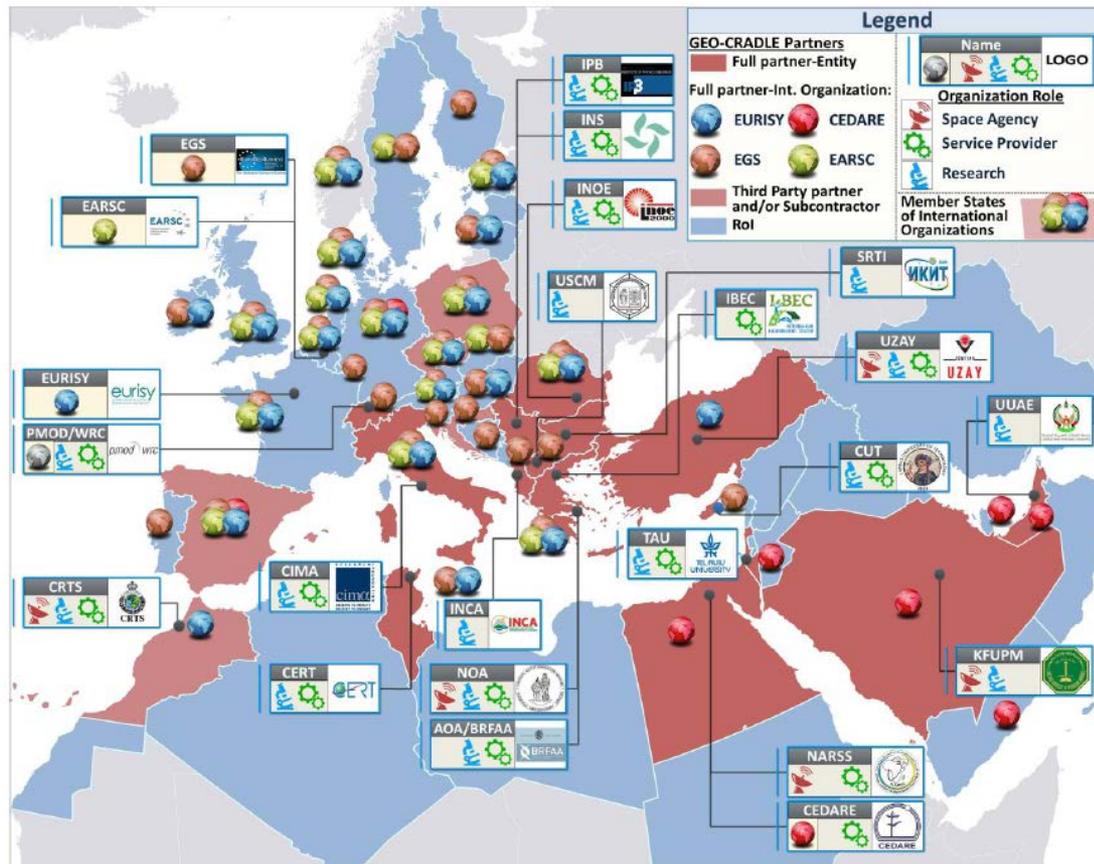

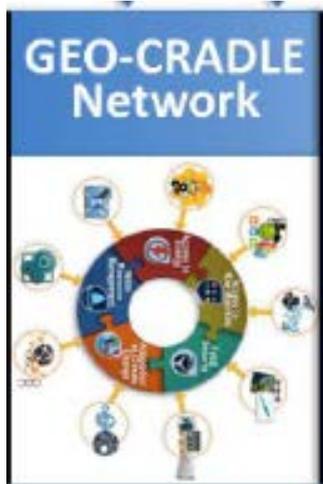

Whom and where?

# GEO-CRADLE

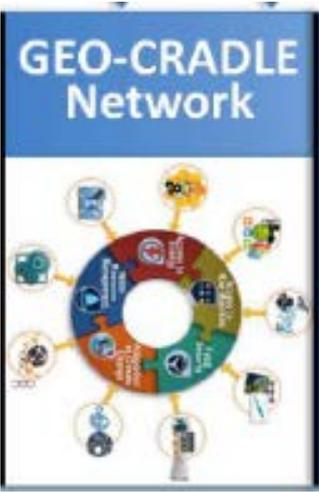

## Whom and where?

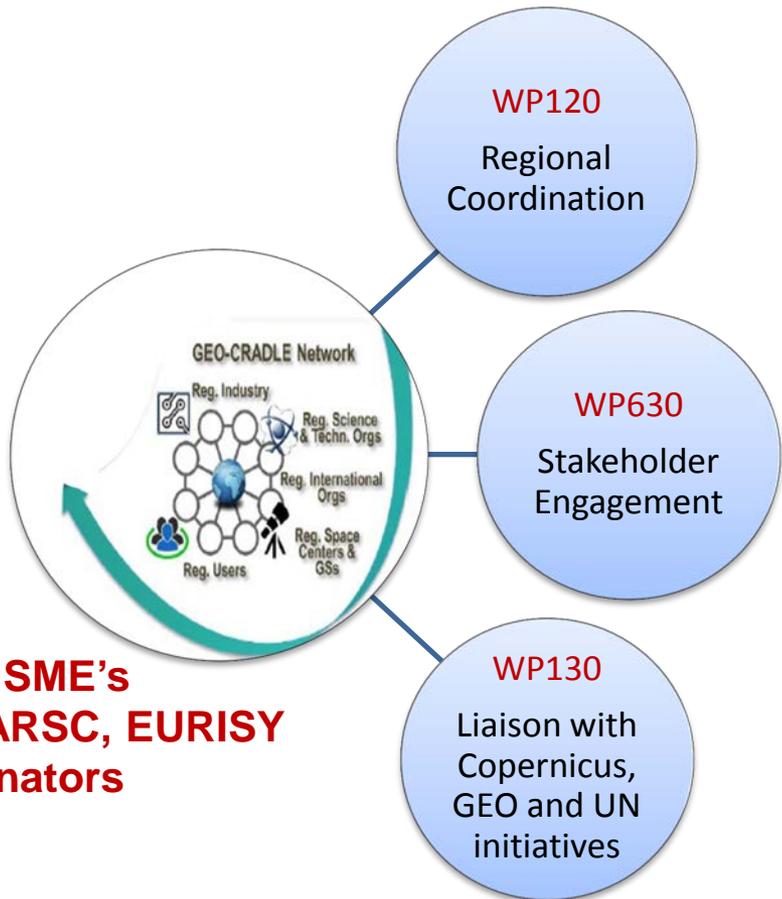

# GEO-CRADLE

# Links and feedbacks

Open questions - target

- ❖ **How can we amplify the – currently weak role of SME's**
- ❖ **What activities are envisaged by partners e.g. EARSC, EURISY**
- ❖ **What initiatives are expected by regional coordinators**
- ❖ **Is there early precaution for this e.g. in WP2**

... a catalogued network of existing-available SME's (profile, service capacities, evaluation, areas of interest (food security, air, raw material, CC, water) ...

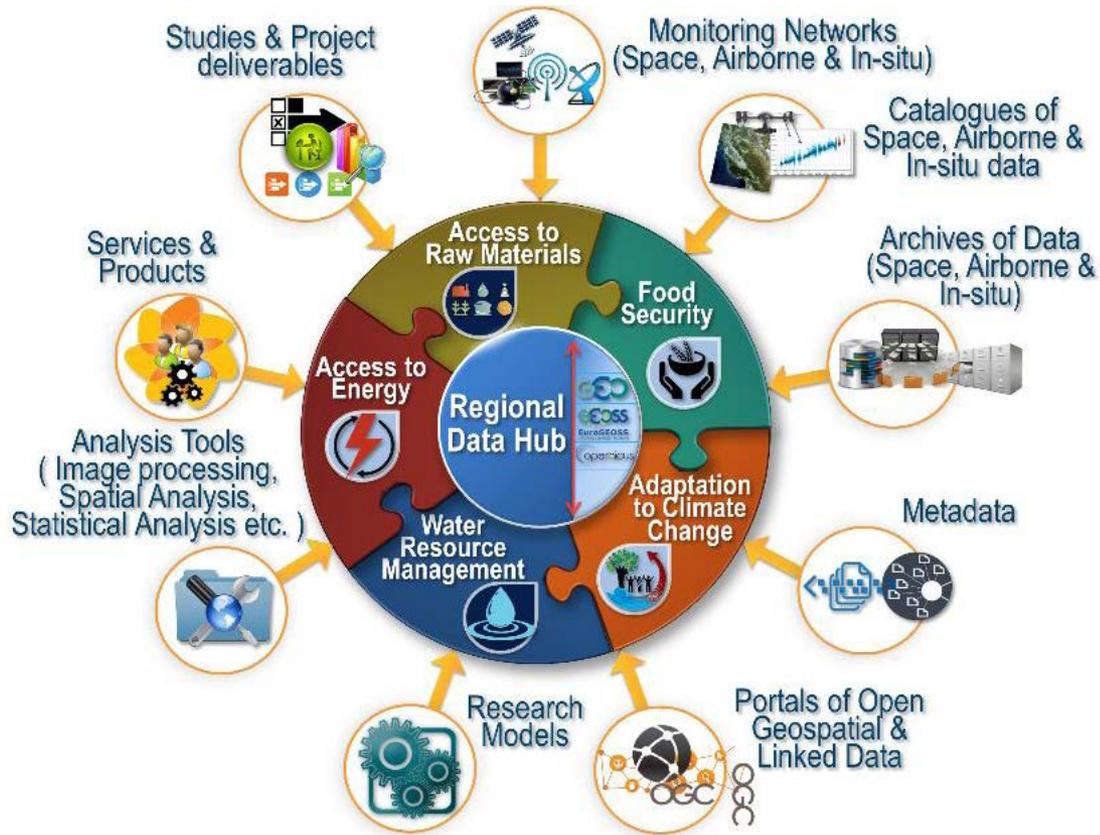

# GEO-CRADLE

## From a Community Portal to a Regional Data Hub

# GEO-CRADLE

# Links and feedbacks

Open questions - target

- ❖ What is the best we should aim at for delivering the RDH
- ❖ How could partners and reg. coordinators commit to bring or establish links with regional data, services, products ... providers (WP2)
- ❖ How could we assure compatibility with GEOSS GCI
- ❖ What feedback could GEO-CRADLE provide back to GEOSS regarding e.g. user friendliness, architecture

A first operational RDH architecture with initial links to GEOSS GCI, continuous flow of regional data, demonstrational services, and a specific plan for future sustainable operation to be fed into the Roadmap

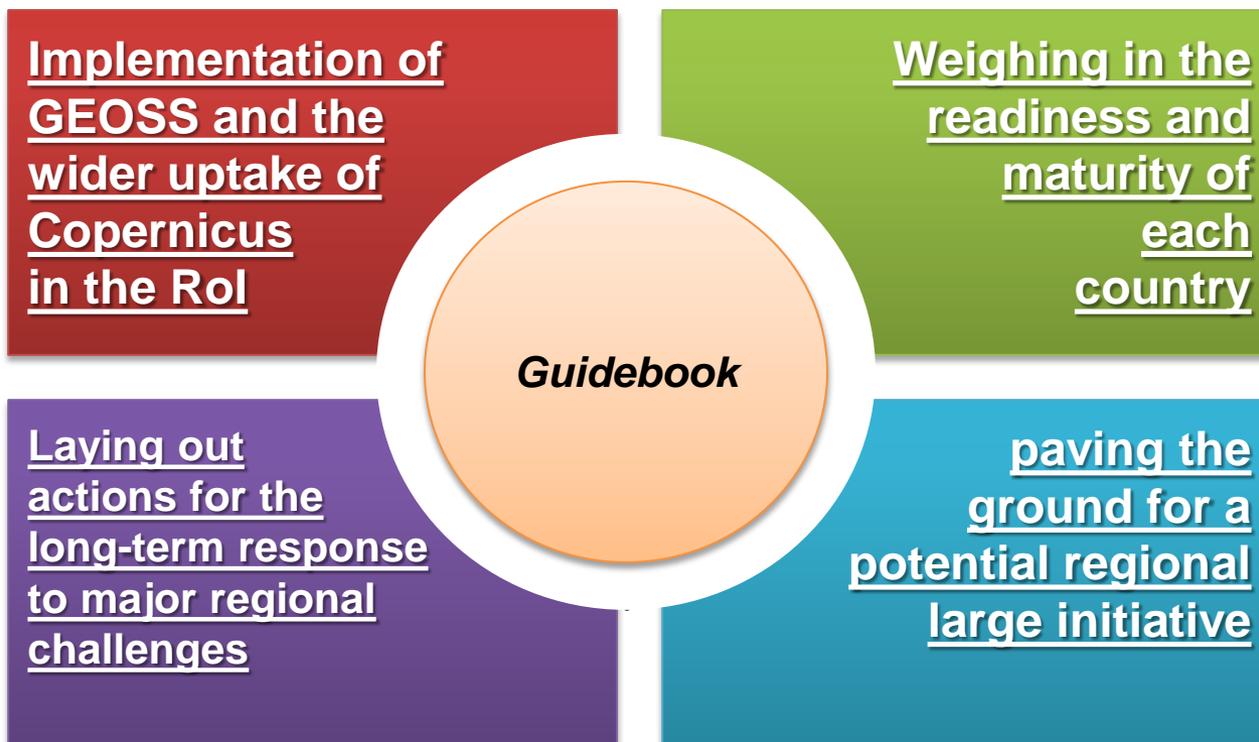

# GEO-CRADLE

Roadmap for future  
Implementation  
of GEOSS

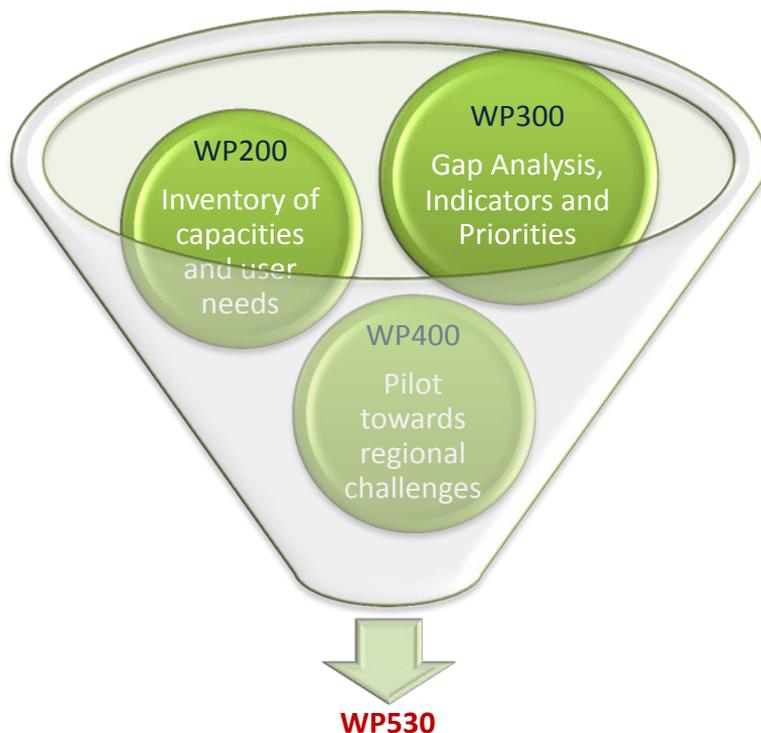

## Main Scope

# GEO-CRADLE

## Roadmap for future Implementation of GEOSS

**Roadmap for future GEOSS & Copernicus  
implementation**

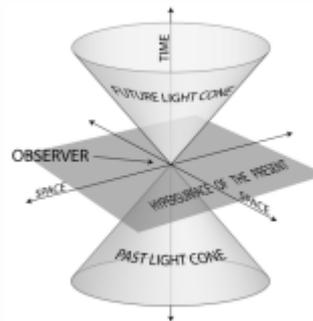

## Means

- Enable transfer of best practices
- Adjust actions by member's "GEO" maturity
- Promote Data Sharing Principles
- Funding opportunities
- Work together on GEOSS and Copernicus **regional VISION**

# GEO-CRADLE

Roadmap for future Implementation of GEOSS

What is our future?

Flagship

GEO-CRADLE

Initiative

Community Activity

kick-Off Meeting, 19th of February, 2016

# GEO-CRADLE

## GEO-CRADLE's Liaison Activities

### GEO Office

*Director:* **Dr. Evangelos Gerasopoulos**

*Secretary:* **Mrs Eleni Christia**

### National Delegation

*GEO Principal:* **Prof. Christos Zerefos**

*Deputy GEO Principal:* **Prof. Kanaris Tsinganos**

<http://www.greekgeo.noa.gr/>

# GEO-CRADLE

## Report on 1<sup>st</sup> Liaison Activities

# day1

### 1st Meeting, GEO-CRADLE – GEOSEC

GEO-CRADLE Liaison Office (represented by **Evangelos Gerasopoulos**, Greek GEO Office Director) and GEO Secretariat (represented by **Barbara Ryan**, Sec. Director, **Andiswa Mlisa**, AfriGEOSS Capacity Building and User Engagement and **Paola De Salvo**, Information Technology Officer) at **Geneva on Feb 1<sup>st</sup> 2016**.

# GEO-CRADLE

## Report on 1<sup>st</sup> Liaison Activities

# day1

### **Brief presentation of GEO-CRADLE:**

- Coincidence of many of GEO-CRADLE's tasks with GEO's Foundational Tasks (such as **CD-01 Capacity Building Coordination**, **CD-02 Reinforcing Engagement at National and Regional levels** and **GD-07 GCI Development**) and Initiatives (**GI-06 AfriGEOSS**)
- Establish connection with GEO's Work Programme
- Community building and key actors engagement in the RoI
- Inform regional GEO Principals for the project and national activities
- Linkages with the GEO Societal Benefit Areas (SBAs)

### **Representation of GEO in GEO-CRADLE's Advisory Board:**

- Cover the need for continuous and multi-aspect interaction
- Transfer best practices and lessons learnt e.g. from AfriGEOSS
- Establish links with other GEOSEC key personnel and/or GEO Community at large

# GEO-CRADLE

## Report on 1<sup>st</sup> Liaison Activities

# day1

### **GEO-CRADLE Regional Data Hub:**

- A Regional Data Hub (RDH) could easily start as a “Community Portal”
- Regional info and data from the GCI to the the RDH
- RDH and relevant GEO-CRADLE’s WP tasks to identify and bring back to the GCI regional user needs
- GEO-CRADLE RDH as a **GEOSS pilot** - well documented processes
- Balance between RDHs own “character” and compatibility with GEOSS
- Establishment of specific working groups e.g. GEO-CRADLE ITs with GEO’s GCI Development team. Discovery and Access Broker (DAB), ESA – portal restructuring

# GEO-CRADLE

## Report on 1<sup>st</sup> Liaison Activities

# day3

### **2nd Meeting, GEO-CRADLE – WMO/GAW**

GEO-CRADLE Liaison Office (represented by **Evangelos Gerasopoulos**, Greek GEO Office Director) and WMO/GAW (represented by **Oksana Tarasova**, Chief, AER/WMO) at **Geneva on Feb 3rd 2016**.

# GEO-CRADLE

## Report on 1<sup>st</sup> Liaison Activities

# day3

### **Brief presentation of GEO-CRADLE:**

- Turning science data into services or products
- Tailored type of collaboration and a regional mechanism for WMO regional capacities maintenance/coordination
- Identification of regional challenges and prioritization

# GEO-CRADLE

## Deliverables

Del N°	Deliverable Name	Delivery Date	Brief Description
D510.1	Online database for inventory of capacities and needs	M1	Online database to store the information produced in WP200
D510.2	GEO-CRADLE Portal Specifications (I: Functional & II: Technical)	M3 M4	Describes the functional (M3) and technical (M4) specifications of the portal
D510.3	GEO-CRADLE Portal (I, II, III)	M6 M12 M24	First release of online database with integrated front-end (M6); fully-functional release of operational portal with integrated Data Hub (M12); final upgrade (M24)
D520.1	Regional Data Hub Specifications	M6	Describes the functional and technical specifications of the Data Hub, incl. links to datasets, user interfaces etc.
D530.1	Roadmap for future implementation of GEOSS and Copernicus	M27	Provides a set of recommendations for future action towards implementation of GEOSS and Copernicus in the RoI

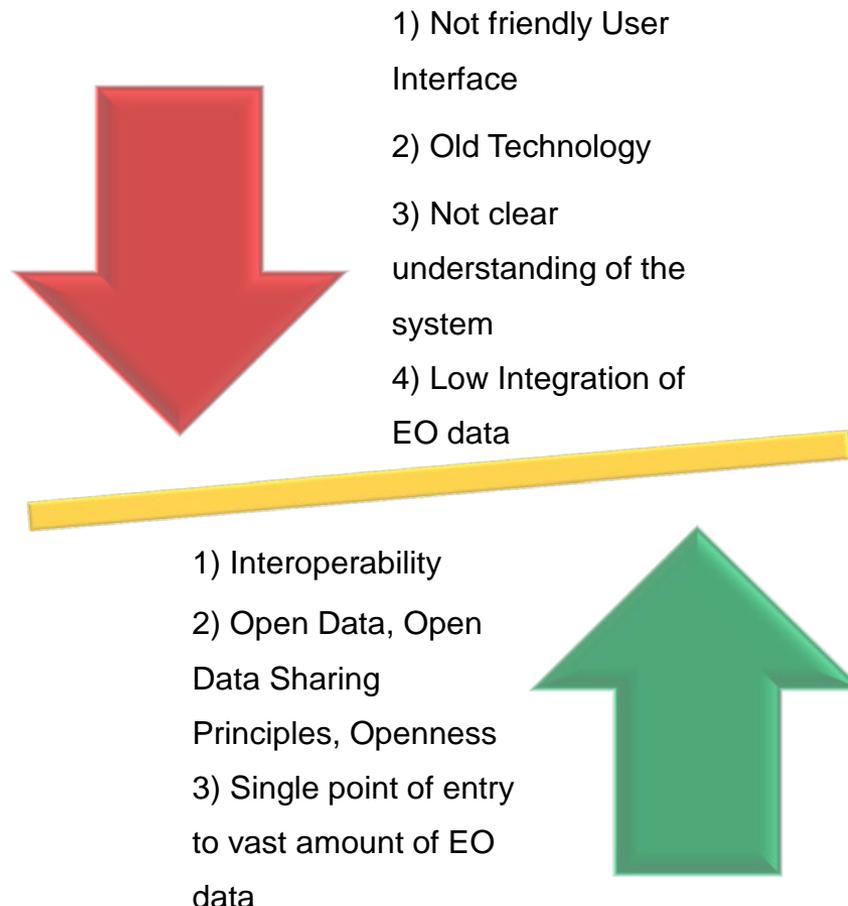

# GEO-CRADLE

## GEOSS Portal

**Introduction:** The GEOSS Portal is the main entry point to Earth Observation data from all over the world. Links the world-wide community of practice in nine **Societal Benefit Areas** providing the necessary tools for searching and/or registering data.

**Vision:** The Regional Data Hub (RDH) aspires to become a concrete contribution of GEO-CRADLE to the implementation of GEOSS and Copernicus in the RoI.

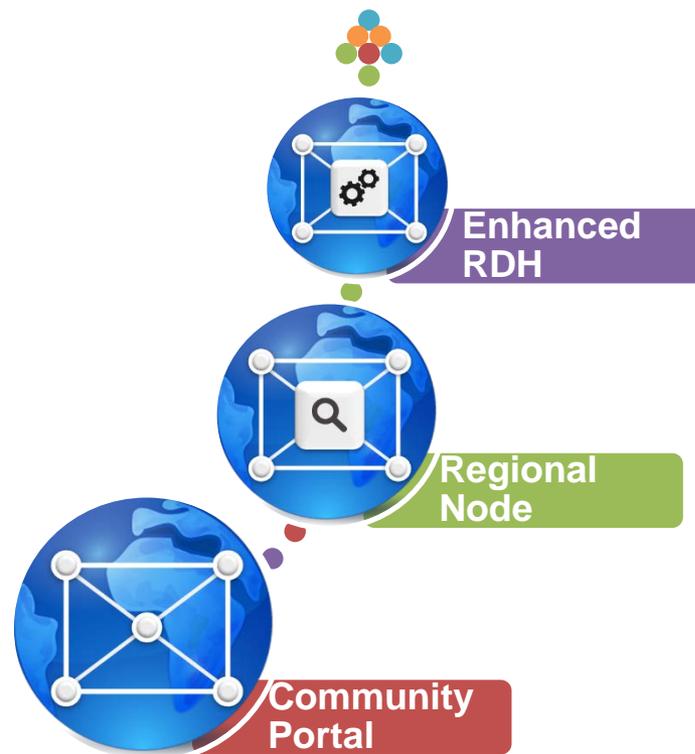

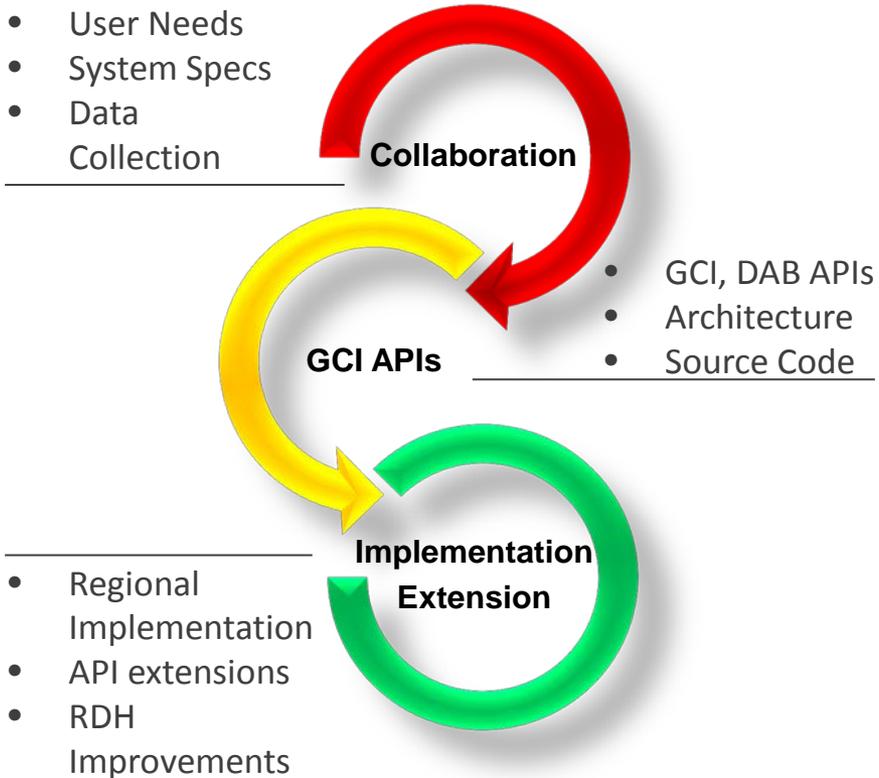

- ✓ Strengthen the Portal capabilities.
- ✓ Alleviate its shortcomings.

# GEO-CRADLE

## Approach

# GEO-CRADLE

## User Friendly Interface

- Based on up-to-date Human Computer Interaction and User Experience principles.
- Based on state of the art Web frameworks: Angular JS, Lavarel PHP, etc.
- Model View Controller (MVC) architecture for the separation of the Graphical User Interface (GUI) from the underlying logic.

## Federation

- Homogenization of the integrated data / metadata (e.g. NetCDF, HDF for the space-borne data).
- Standardized access interfaces based on well established protocols (e.g. OGC WFS).
  - Standardized metadata cataloguing, storing and dissemination (e.g. INSPIRE Implementing rules, GML format).

*One-stop-shop* for  
**RoI specific  
data/information/  
knowledge access**  
for EO players,  
service providers,  
and end users.

## Fine-Grained Organization

- Better organization of data, metadata, services and products.
- Cleaner navigation between:
  - Metadata catalogues,
  - Data storages,
  - Product services,
  - OGC services such WMS, WFS, etc.

## Enhanced Functionality

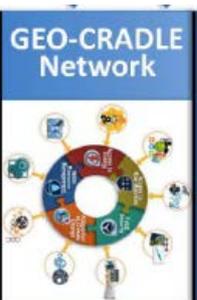

- Systematic verification / validation of each dataset availability (e.g. heuristic mechanisms deciding a resource's availability) .
- Free-text search functionality using state-of the art APIs such as OpenSearch.
- An advanced filtering mechanism enabling the user to pose flexible and complex queries.

# GEO-CRADLE

## Panel Session 3:

### Contributions to specific challenges, GEOSS and Copernicus Regional Contribution to GEOSS and Copernicus

- ❖ What is the best we should aim at for delivering the RDH ?
- ❖ How could partners and reg. coordinators commit to bring or establish links with regional data, services, products ... providers (WP2) ?
- ❖ How could we assure compatibility with GEOSS GCI ?
- ❖ What feedback could GEO-CRADLE provide back to GEOSS regarding e.g. user friendliness, architecture ?

- ❖ How can we amplify the – currently weak role of SME's ?
- ❖ What activities are envisaged by partners e.g. EARSC, EURISY ?
- ❖ What initiatives are expected by regional coordinators ?
- ❖ Is there early precaution for this e.g. in WP2 ?
