

Coordinating and integRating state-of-the-art Earth Observation Activities in the regions of North Africa, Middle East, and Balkans and Developing Links with GEO related initiatives towards GEOSS

GEO-CRADLE

Addressing regional needs through DataHub

Dr. Panagiotis Kosmopoulos / National Observatory of Athens

The GEO-CRADLE project has received funding from the European Union's Horizon 2020 research and innovation program under grant agreement No 690133.

The GEO-CRADLE project

Funded under H2020 - Climate action, environment, resource efficiency and raw materials

ACTIVITY: Developing Comprehensive and Sustained Global Environmental Observation and Information Systems

CALL IDENTIFIER: H2020 SC5-18b-2015 Integrating North African, Middle East and Balkan Earth Observation capacities in GEOSS

Project GA number: 690133

Project coordinator: Haris Kontoes (NOA)

Total Budget: 2,910,800.00 €

The GEO-CRADLE project

... is the only EU GEO funded CSA that runs over the diversified territories of North Africa, Middle East and Balkans;

- ✓ **Identifying common needs and regional priorities;**
- ✓ **Fostering the regional cooperation and integration of monitoring capabilities and skills, and facilitating the networking of stakeholders;**
- ✓ **Defining coordination and support actions that are beneficial from societal and market wise point of view, and also realistic and in line with the domestic priorities and user needs;**
- ✓ **Proposing/setting up large scale regional initiatives in Earth Observation (space based and in-situ) relating to capacity building and delivery of services and innovative information in the thematic areas of the project such as:**

Adaptation to Climate Change
Improved Food Security – Water Extremes Management
Access to Raw Materials
Access to Solar Energy

The GEO-CRADLE project

Objectives

- ✓ **Promote the uptake of EO services and data** in response to regional needs.
- ✓ **Support the effective integration** of existing Earth Observation Capacities in the region.
- ✓ **Facilitate the engagement** of the complete ecosystem of EO stakeholders in the region.
- ✓ **Enhance the participation** in and contribution to the implementation of GEOSS and Copernicus in **North Africa, Middle East and the Balkans**.

GEO-CRALDE pilots

The Solar Energy Nowcasting SystEm (SENSE) pilot

Coordination of regional EO capacities & research activities (incl. Copernicus Space & Service Segment initiatives) for an operational, satellite-driven, real-time system for solar energy now-cast.

Purpose:

- **Demonstrate ways to maximize value and benefits at the Region of Interest.**
- **Contribute to energy related capacity building.**
- **Create synergies with public and private sector (solar plants, energy distributors, solar energy related end-users).**

Provision of (tailored to end-user):

- **Now-casting and forecasting of solar radiation and solar energy**
- **Long term solar energy atlases for various areas with high temporal and spatial detail**
- **Solar radiation related products (real time and forecasts) related with: health (UV Index (melanoma), DNA damage, cataract, Vitamin D efficiency), agriculture (photosynthesis), scientific.**

**Access to
Solar Energy
(SENSE)**

Showcase

The SENSE pilot

Satellite Data

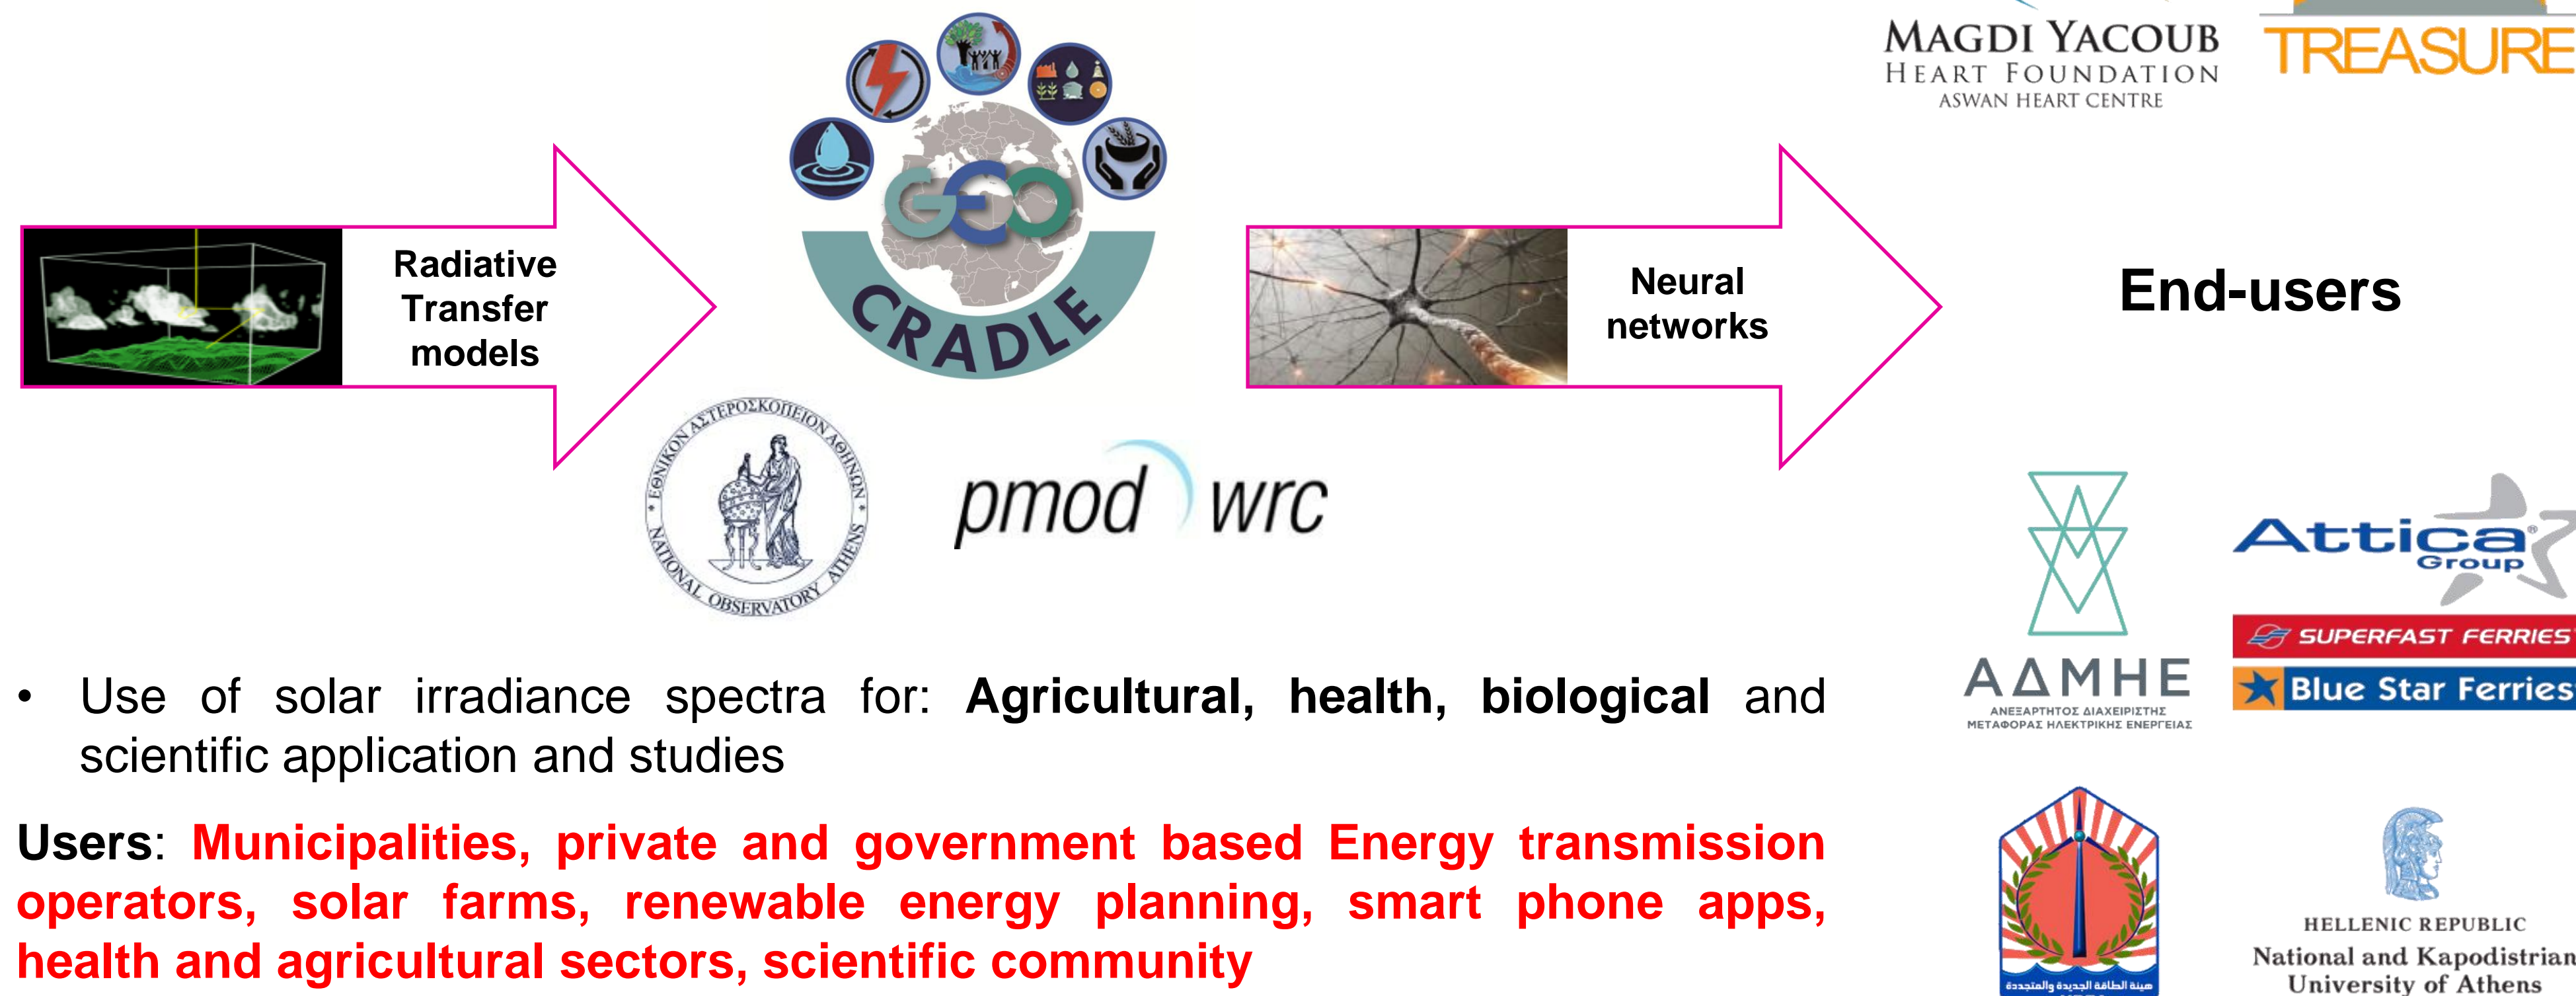

- Solar power production **now-casting and forecasts**, from t+0 min to t+2 hours ahead, with a time resolution from 5 minutes
- Nowcasts and forecasts on different spatial horizons: from the **local plant production to the country scale**
- integration in any already existing Information System. Possibility to add meteorological sensors on-site to **optimize forecasts**

Copernicus Atmospheric Monitoring Service

Regional DataHub – The Concept

3rd GEO
DATA
PROVIDERS
WORKSHOP

DATA PROVIDERS
MEET USERS

FRASCATI, ITALY
2-4 MAY 2018

- The concept is simple, but not easy to implement.
- The RDH aspires to become a de facto “one-stop-shop” for the Region of Interest (RoI) specific data/information/knowledge access for EO players, service providers, and end users.
- In order for this to be accomplished, the RDH has to satisfy the following conditions:
 - i. Be online
 - ii. Connect with GEOSS
 - iii. Connect with multiple remote data sources (big variety in data formats, data types, and data distribution system architectures)
 - iv. Act as a gateway to the users
 - v. Be efficient, and user friendly to both users and administrators
 - vi. Act as an integrated open data management platform

Regional DataHub – The Solution

THE SOLUTION:

- RDH supports two types of users: (a) unauthorized users and (b) authorized users (i.e. administrators, content authors, group owners, etc.)
- The 1st category is interested more to the search, view/preview and download
- The 2nd category is related with an admin panel (i.e. crud functions, content organization, user management, publishing options, etc.)
- DKAN to the rescue!
- Why DKAN ?
 - i. Ultimately, DKAN is a complimentary offering to CKAN in the effort to make data more open and accessible ([source](#))
 - ii. Integrates open data catalog features into Drupal CMS, which is build upon PHP. PHP powers a significant percentage of Web, while Drupal powers ~2% of the Internet as a whole
 - iii. Has a wide community of active users/developers.

Regional DataHub – The Connection with GEOSS

The connection of GEOSS to RDH was a challenging objective of the GEO CRADLE project

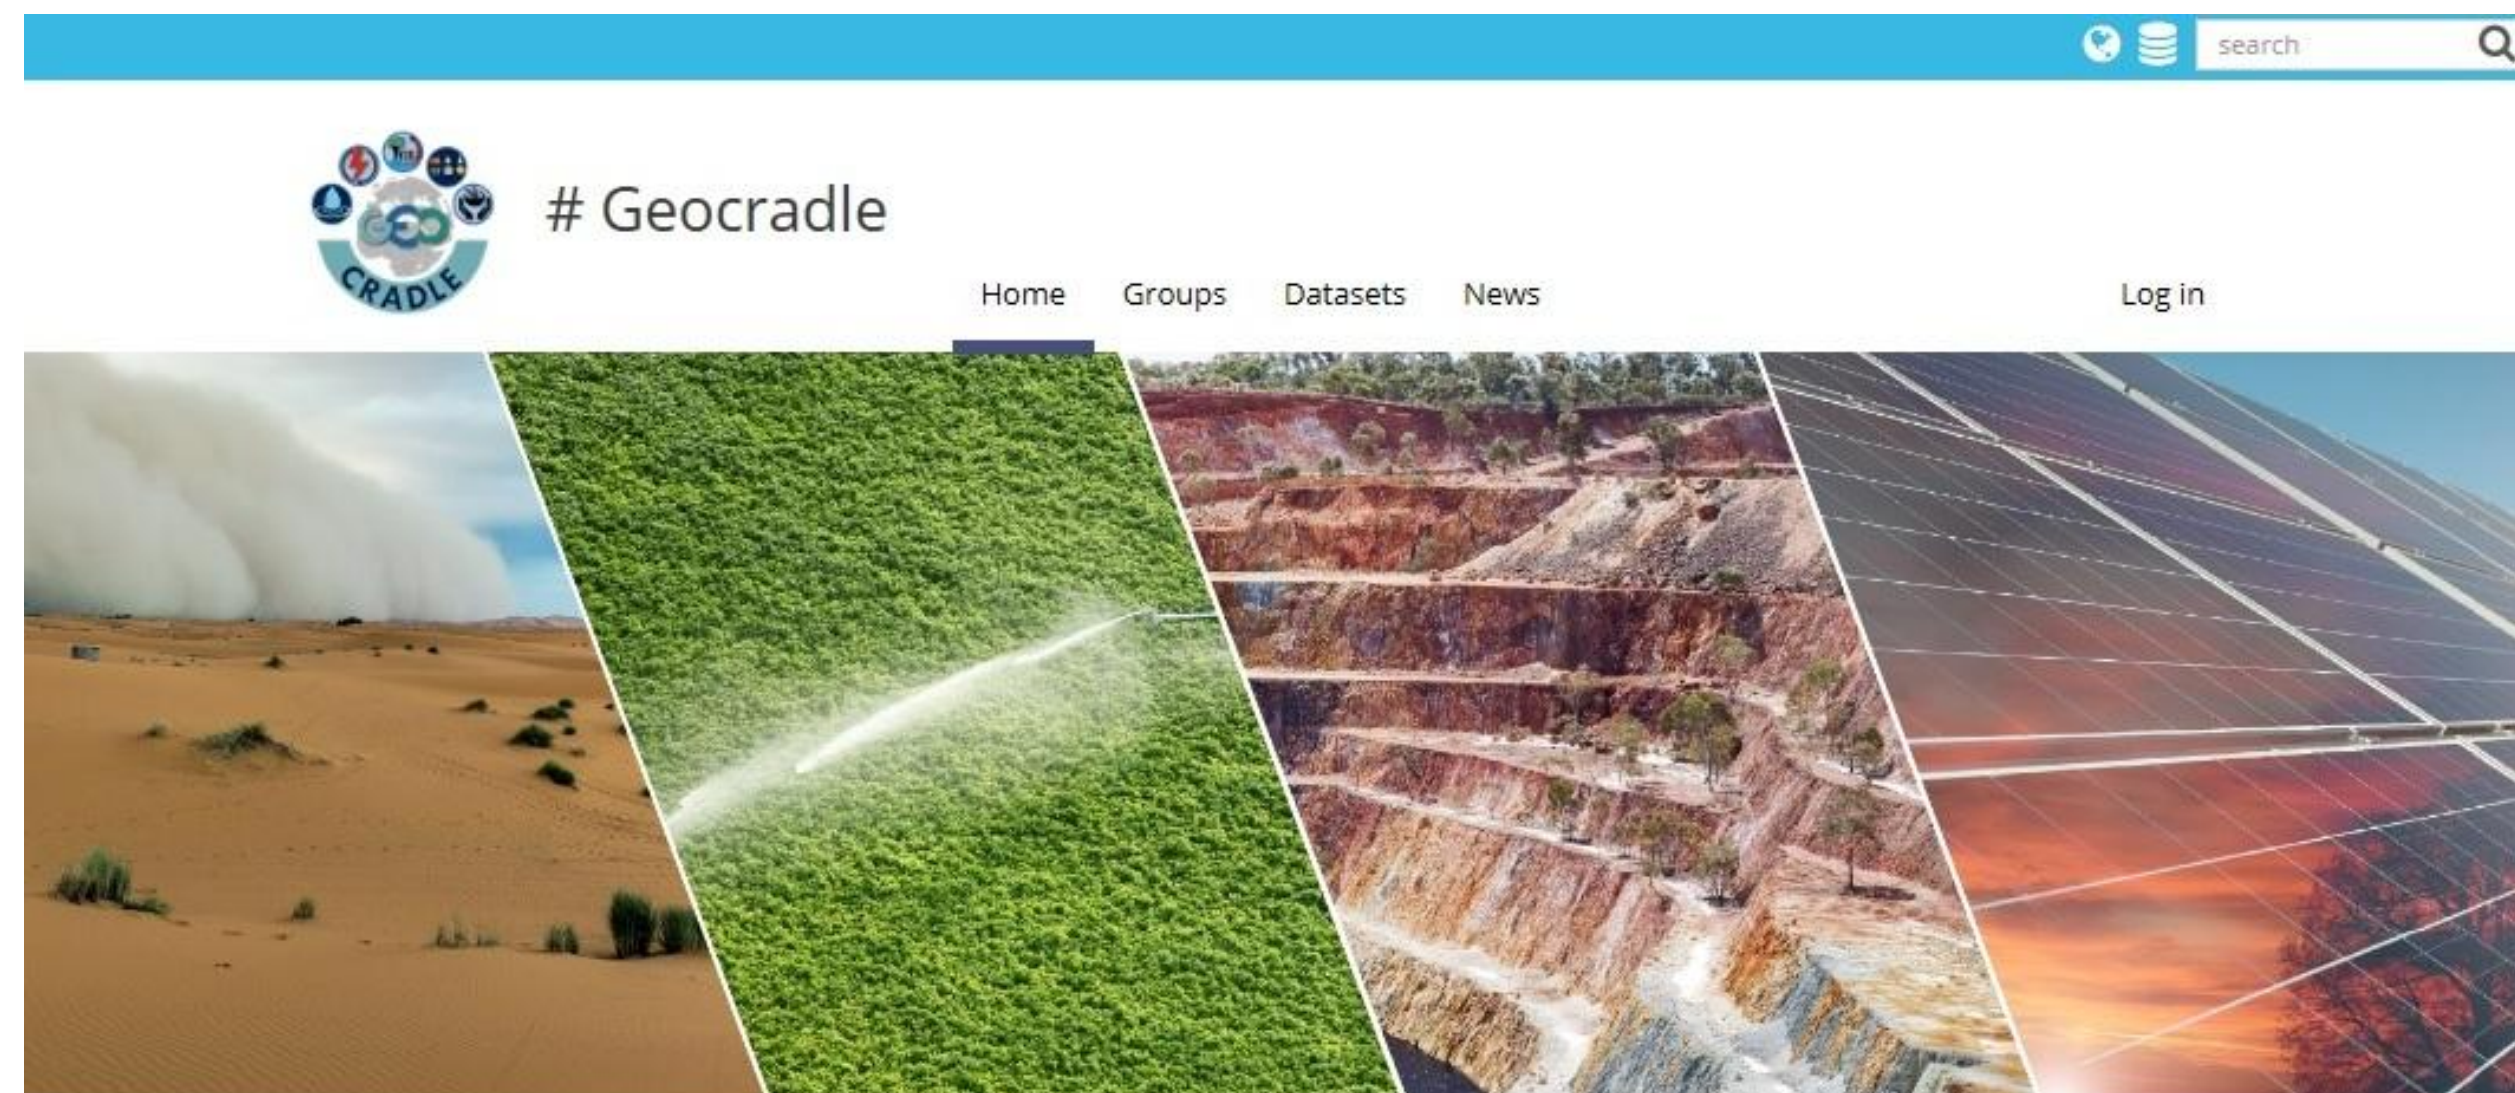

For this to be achieved the GEO DAB APIs were used, and in particular the OpenSearch API

The GEO DAB APIs are really plug and play. However the integration of those APIs in DKAN in an efficient way, has proven a laborious work that demanded novel software architectural design from the development team

Regional DataHub – The Connection with GEOSS

[About](#)

Utilizing the GEO DAB APIs and DKAN for easy access and discovery of regional EO data

The Regional Data Hub (RDH) provides access to both region-related datasets, portals and services developed by a regional network of raw data providers, intermediate users/service providers, end-users from Industry, Academic and Public Sector from the Region of Interest, and, also, datasets and services directly fed from the GEOSS-platform. Moreover, being the centralised gateway for regional data providers to contribute easily and timely their products to GEOSS, the Regional Data Hub is designed to become the focal node in the region in the context of GEOSS and Copernicus implementation. The RDH facilitates access to downloadable files of Space-borne data from real time EO satellite missions acquisitions; data from Airborne campaigns performed in the region; In-situ data; and Models such as Atmospheric and Climate.

Data

Innovation

Involvement

Growth

<http://datahub.geocradle.eu/>

Stable service and full interoperability with GCI and GEO DAB APIs, as well as connection with data available through the project pilots.

Regional DataHub – The Connection with GEOSS

✓Regional DataHub is designed to become the focal node in the region in the context of GEOSS and Copernicus implementation.

- It is an open data web management tool / portal (developed using web technologies such as PHP, HTML5, JavaScript, CSS, etc.) that provides access to region-related datasets and services, directly fed from GCI, and at the same time being the central gateway for regional data providers to contribute easily and timely their products to GEOSS.
- It advances the current state of the art by integrating DKAN, which is a complementary implementation of CKAN (Comprehensive Knowledge Archive Network) over Drupal/PHP, with the GEO DAB APIs. DKAN CMS (Content Management System) is an open-source data management platform that treats data as content, facilitating the subsequent publication, management, and maintenance of these, no matter the administration team, its size and level of technical expertise.

Regional DataHub – The Connection with GEOSS

✓ Several **achievements** were accomplished for the Regional DataHub for the provision of up-to-date functionalities:

- Search in multiple sources (although by default DKAN looks up for datasets and resources in a single local database).
- Search for datasets in remote resources (integration of the GEO DAB APIs in the DKAN environment).
- Display the remote datasets and resources on-the-fly and with high performance (using a rendering cache mechanism which also implements an Adaptive Time-to-Live consistency mechanism to periodically check the consistency of the cached rendering structures with the original data to assure that users do not receive stale data).
- Cleaning data mechanism (cleans identical or duplicate data, discovers missing information for data, discovers URL that have changed or that are not working anymore, discards data with invalid URL schemes, etc.)
- Preview mechanism (to preview data of various formats and services, such as CSV files, Web Map Services, Zip files, etc.)

An integrated Search and Display mechanism that offers the users unified, centralized and user-friendly interface.

Regional Soil Spectral Library

Regional Soil Spectral Library

Part of pilot 2 - Improved Food Security and Water Extremes Management

The importance of soils is ubiquitously recognized; they provide essential services such as food production, prevention of land degradation, water quality, and they act as carbon sinks. It has been thus recognized that a spatio-temporal monitoring of soil quality and soil properties is necessary. One of the most important technologies used to monitor soils is soil spectroscopy which utilizes the spectral information of soil samples to derive their properties. For the successful upscaling (i.e. use of Earth Observation tools) of soil spectroscopy it is important to create detailed soil spectral libraries on the ground, which assist in the validation of the sensors as well as development of soil models.

The Regional Soil Spectral Library

The current dataset contains a regional vis-NIR (350-2500 nm) soil spectral library of the region. It contains metadata regarding the soils sampled, their key properties, and their spectral signature. The spectral signatures were obtained using a standardization protocol. The dataset encompasses the following countries and soil properties:

| Country | Samples | SOM | Texture | CaCO3 | pH | NO3 | EC | CEC |
|----------|---------|------|---------|-------|-----|-----|-----|-----|
| Albania | 107 | 107 | 107 | X | X | X | X | X |
| Bulgaria | 105 | 105 | 105 | X | 105 | X | X | 105 |
| Cyprus | 96 | 96 | 94 | 96 | 96 | X | 93 | X |
| Egypt | 10 | 6 | X | 4 | 6 | X | 6 | X |
| FYROM | 124 | 124 | 124 | X | 124 | X | X | X |
| Greece | 928 | 928 | 928 | 928 | X | 928 | X | X |
| Israel | 221 | 106 | 193 | 150 | 137 | X | 141 | X |
| Serbia | 63 | 63 | 63 | 63 | 63 | 63 | X | X |
| Turkey | 100 | 94 | 98 | 100 | 100 | X | 100 | X |
| All | 1754 | 1629 | 1712 | 1341 | 631 | 991 | 334 | 105 |

Form of the datasets

To assist future researchers using this soil spectral library, the datasets are provided in the following formats:

- Per country SSLs in .csv format
- Complete GEO-CRADLE SSL in .csv format

The documentation describing what each column represents may be found in D4.6.

Contribution to EO market uptake

Submit a roadmap together with funding priorities in relation to capacity building, service delivery, filling in gaps (networks, infrastructures, data sharing, skills), training, education, service provision, and business uptake at regional level.

GEO-CRADLE will be a starting point for short future investments towards and beyond the implementation of GEO, GEOSS and Copernicus products and activities and visioning innovative high-end applications and technologies.
