
*NEW SOIL AND VEGETATION MAPPING SENSORS
FOR FIELD AND AIRBORNE APPLICATIONS*

Petri Nygrén, SPECIM Oy

GEO CRADLE Limassol 16.11.2016

CONTENT

- SPECIM Oy in few words
- New sensor family
- Some hyperspectral imaging application examples

SPECIM, Spectral Imaging Ltd.

Since 1995, world leading
manufacturer and supplier for
hyperspectral imaging sensors

Distributor and integrator network covers more than 40 countries

~5000 sold spectrographs

~150 sold AISA sensors (AISA = Airborne Imaging Spectrograph for
Applications)

~60 employees, privately owned

From Oulu, Finland

SPECTRAL RANGE COVERED

AISA HISTORY

1995

1996 1.Aisa
(Classic)

2001 EAGLE

2008 EAGLE
II

2011 OWL

2012 FENIX

2013 IBIS

2014 FENIX
1K

2015
KESTREL 10,
KESTREL 16

NEW AISA FAMILY

FENIX	FENIX 1K	OWL	IBIS	KESTREL
Co-registered VNIR and SWIR pixels through one front optics in one File	Co-registered VNIR and SWIR pixels through one front optics in one File	Smallest high performance thermal infrared (LWIR) hyperspectral imager with system integral radiometric calibrator	First airborne sensor to quantitatively map sun-induced fluorescence. Spectral range at red edge	High performance UAS sensor (< 5 kg), VNIR and eNIR models (Kestrel10, Kestrel16)
Pushbrooming hyperspectral imager, 384 swath pixels, 380-2500nm, Up to 620 bands of 3-10nm FWHM	Pushbrooming hyperspectral imager, 1024 swath pixels, 380-2500nm, Up to 620 bands of 3-10nm FWHM	Onboard radiometric calibrator, Pushbrooming hyperspectral imager, 384 swath pixels, 7.7-12.6µm, 95 bands of 100nm FWHM	Pushbrooming hyperspectral imager, 384 swath pixels, 680-840nm, 1000bands of 0.25nm	Pushbrooming hyperspectral imager, 640-2040 swath pixels, 380-1600nm, Up to 350 bands of 3-8nm FWHM

SPECIM FX10 / 17

Free wavelength selection from 220 bands within the camera coverage at very high collection speeds

WHAT IS NEW IN THE SENSOR FAMILY

- Smaller SWaP (Size, Weight and Power requirements)
- Simplified operation
- Full calibrations provided for each AISA sensor:
Radiometric, Spectral and Geometric
 - Improved support for atmospheric correction routines
 - Improved georeferencing accuracy
 - Improved spectral accuracy

SAME SENSOR FOR FLYING, FIELD AND LAB USE

Vegetation / pollution / material detection: FENIX

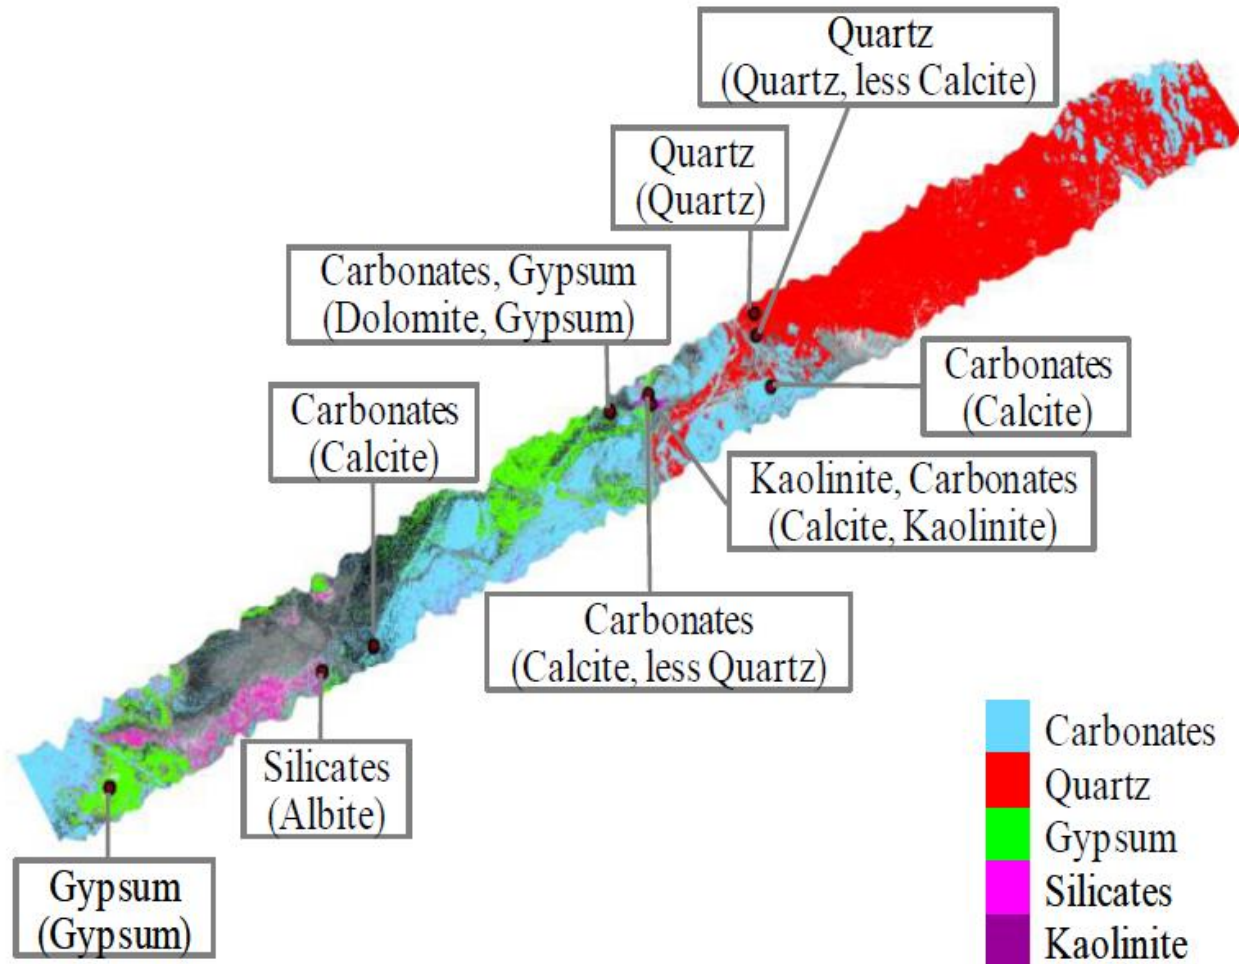

TARGET SPECIES EXAMPLE: FENIX

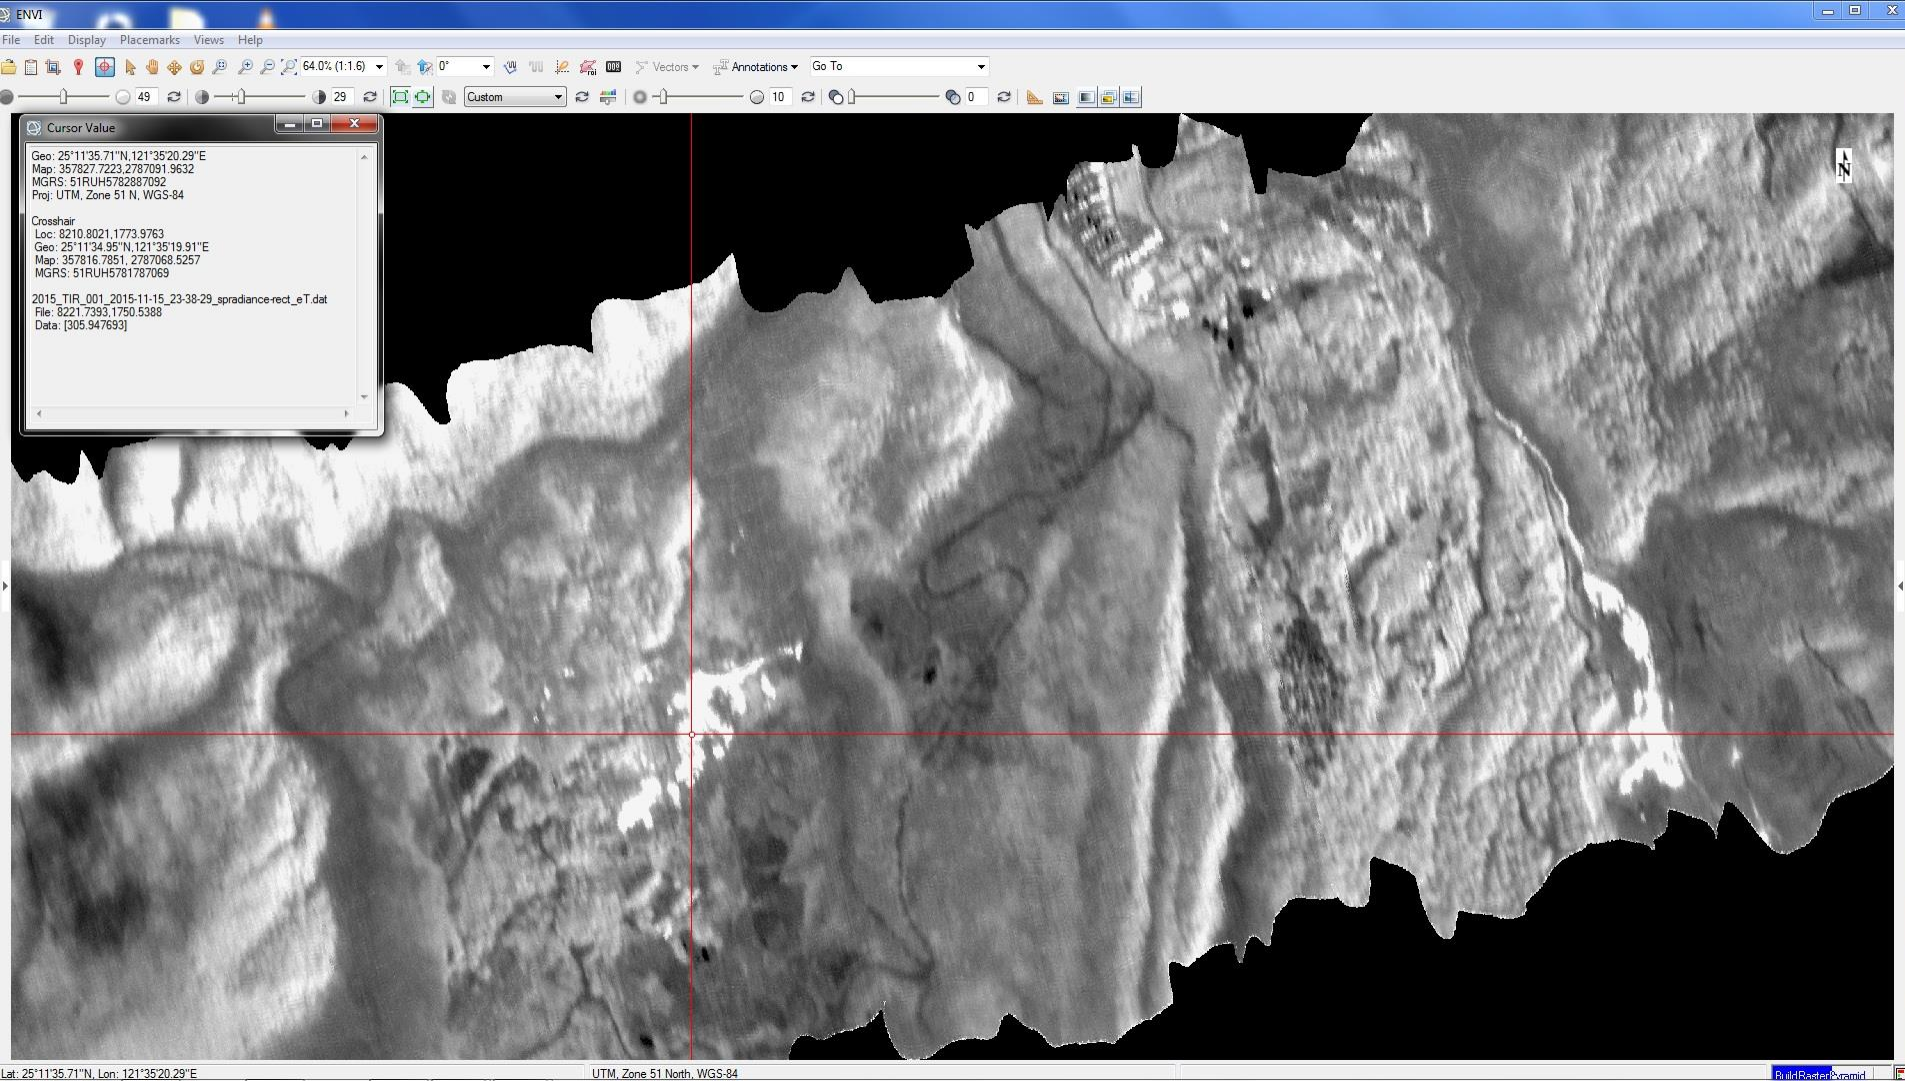

GEOLOGICAL MAPPING EXAMPLE: OWL

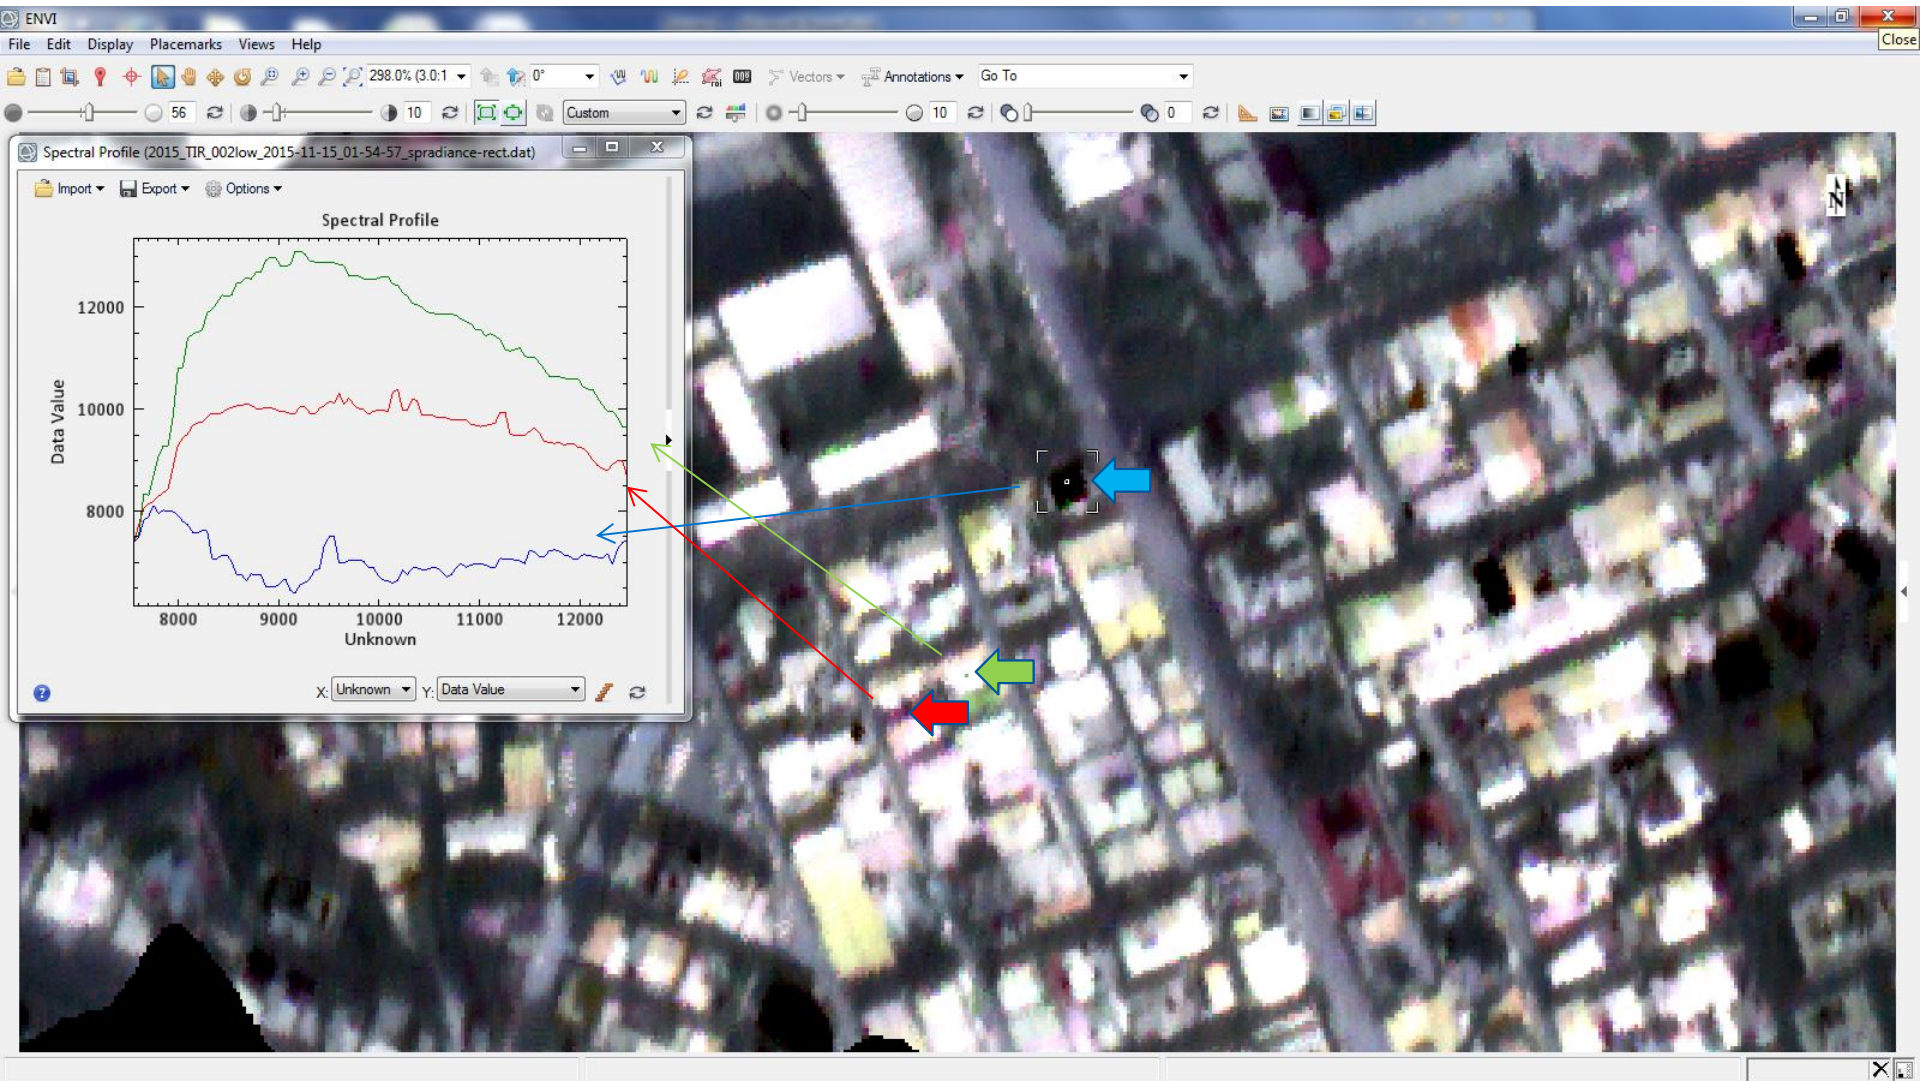

GEOLOGICAL MAPPING EXAMPLE: OWL

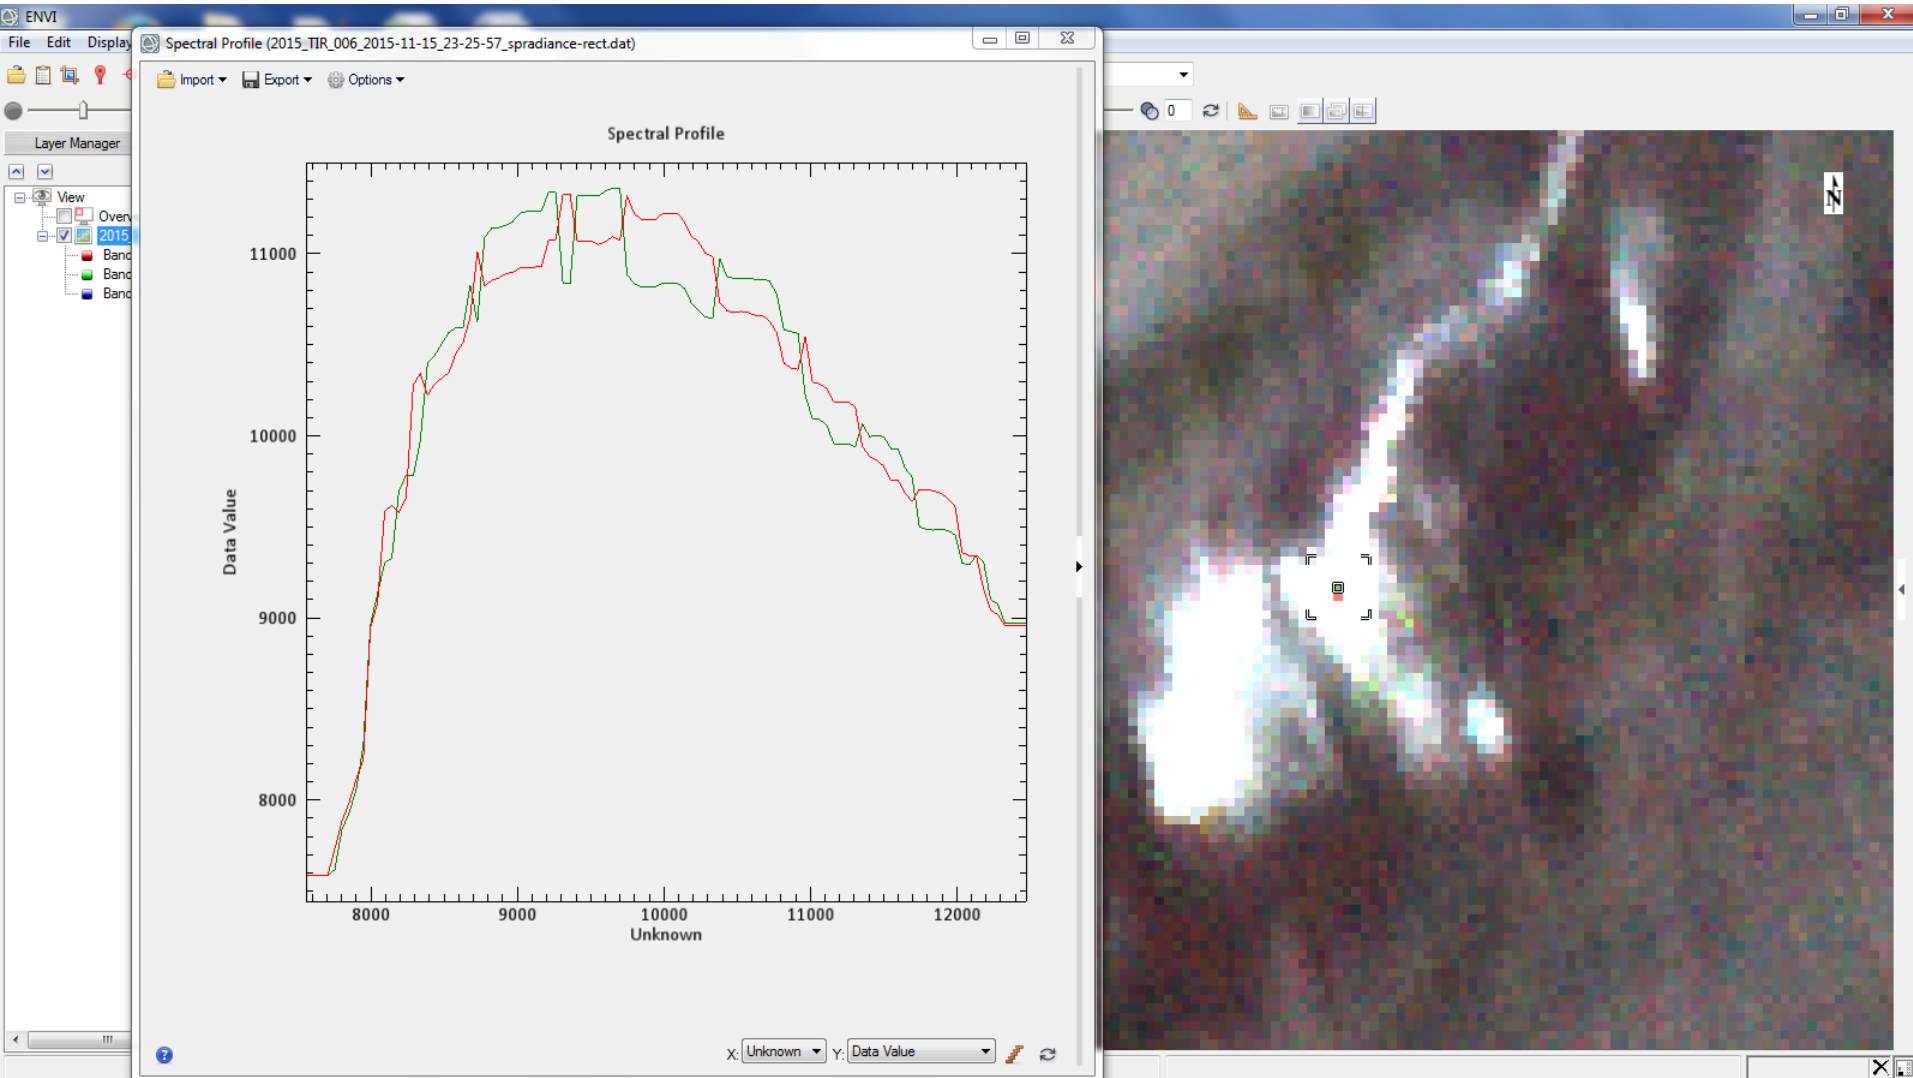

GEOHERMAL EXAMPLE: OWL

EMISSIVITY MEASUREMENT: OWL

HOT SPRING EXAMPLE: OWL

AisaIBIS

680-780 nm

0.11 nm sampling

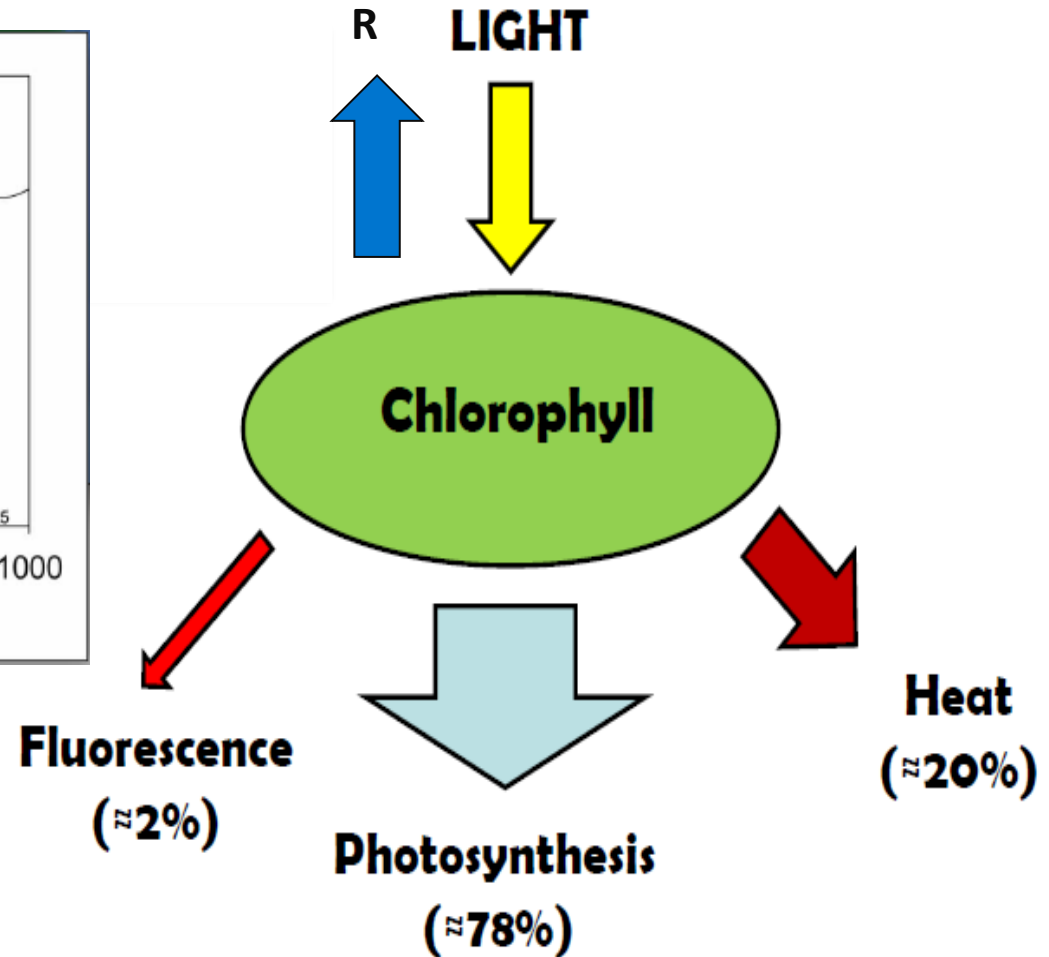

0.25 nm spectral resolution

Extremely low noise

High SNR

SUN-INDUCED CHLOROPHYLL FLUORESCENCE

LATEST AISA: KESTREL

- 4.8kg system weight
- Remote control capability through Ground Station sw
- Kestrel 10 : 400-1000nm
 - Vegetation and water related applications
- Kestrel 16: 600-1600nm
 - Industrial applications
- Full system level product
 - Sensor
 - Data collection device (DPU)
 - Scanner- and georeferencing accessories available

TREE SPECIES CLASSIFICATION: KESTREL

LAMBIR HILLS NATIONAL PARK (Part)

Pseudo Natural Color Representation of Image Dataset Acquired on 15 Aug 2009

LAMBIR HILLS NATIONAL PARK (Part)

False Color Representation of Image Dataset Acquired on 15 Aug 2009

KESTREL IN MANNED AIRCRAFT

UAV INSTALLATIONS

SPeCIM

SPECTRAL IMAGING

PROCESSING STAGES

Raw data from flight (non-georectified DN numbers)

Preprocessing (georectified radiances)

Atmospheric correction (georectified reflectances)

Analysis

Delivery
